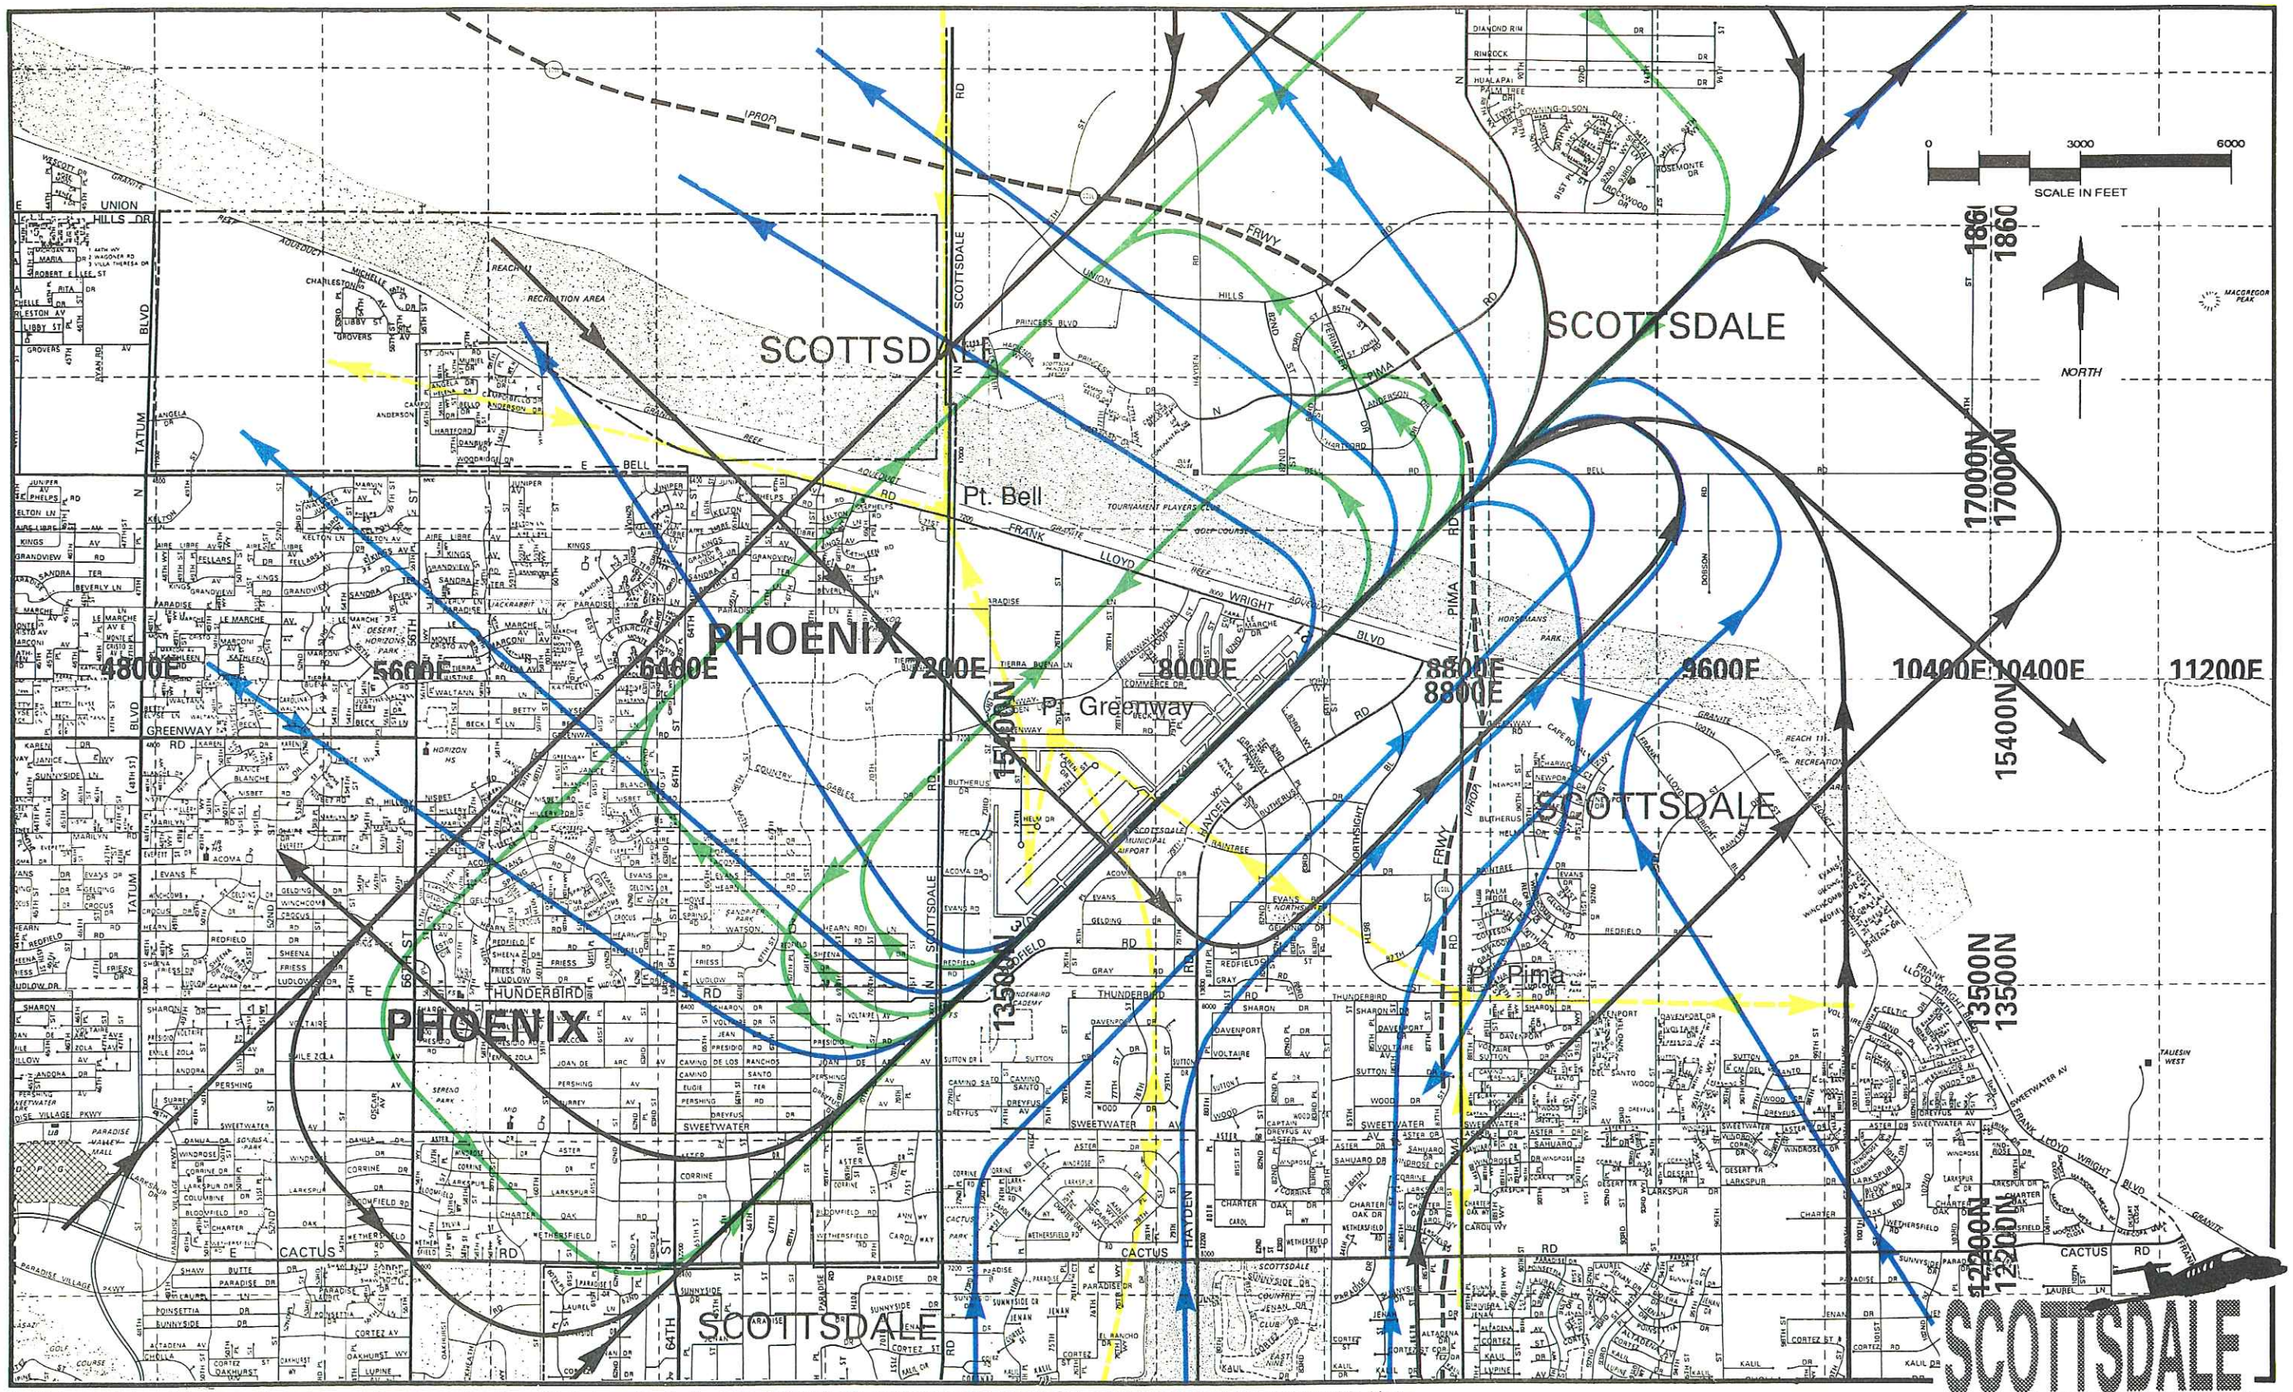
91SP03-7/13/93

LEGEND:

Jet Flight Tracks | Propeller Flight Tracks | Propeller Training Tracks | Helicopter Flight Tracks



This flight track is intended to generally depict areas of numerous aircraft overflights (operations). Significant latitude is intentionally designed into the FAA national airspace utilized by Scottsdale Airport. The routes shown in this map are general in location. All residential areas depicted on this map will experience aircraft overflights (to varying degrees). Daily overflights averaged approximately ± 850. Although Scottsdale Airport is open 24-hours a day, the majority of overflights occur daily between 6 AM and 11 PM. Altitudes of individual aircraft will vary due to weather conditions, traffic within the traffic pattern, aircraft performance, and pilot proficiency. There are no restricted areas which preclude an aircraft from flying within a five (5) mile radius of Scottsdale Airport.
