The NCS™ is presented by NRC in collaboration with ICMA.

NRC is a charter member of the AAPOR Transparency Initiative, providing clear disclosure of our sound and ethical survey research practices.

About

The National Citizen Survey™ (The NCS) report is about the “livability” of Scottsdale. The phrase “livable community” is used here to evoke a place that is not simply habitable, but that is desirable. It is not only where people do live, but where they want to live.

Great communities are partnerships of the government, private sector, community-based organizations and residents, all geographically connected. The NCS captures residents’ opinions within the three pillars of a community (Community Characteristics, Governance and Participation) across eight central facets of community (Safety, Mobility, Natural Environment, Built Environment, Economy, Recreation and Wellness, Education and Enrichment and Community Engagement).

The Community Livability Report provides the opinions of a representative sample of 305 residents of the City of Scottsdale. The margin of error around any reported percentage is 6% for all respondents. The full description of methods used to garner these opinions can be found in the *Technical Appendices* provided under separate cover.

Quality of Life in Scottsdale

Almost all residents rated the quality of life in Scottsdale as excellent or good. This rating was higher than the national comparison (see Appendix B of the *Technical Appendices* provided under separate cover).

Shown below are the eight facets of community. The color of each community facet summarizes how residents rated it across the three sections of the survey that represent the pillars of a community – Community Characteristics, Governance and Participation. When most ratings across the three pillars were higher than the benchmark, the color for that facet is the darkest shade; when most ratings were lower than the benchmark, the color is the lightest shade. A mix of ratings (higher and lower than the benchmark) results in a color between the extremes.

In addition to a summary of ratings, the image below includes one or more stars to indicate which community facets were the most important focus areas for the community. Residents identified Safety, Natural Environment and Economy as priorities for the Scottsdale community in the coming two years. The facets of Economy and Recreation and Wellness received ratings that were higher than the national benchmarks. All other facets had evaluations that were positive and similar to the national averages. This overview of the key aspects of community quality provides a quick summary of where residents see exceptionally strong performance and where performance offers the greatest opportunity for improvement. Linking quality to importance offers community members and leaders a view into the characteristics of the community that matter most and that seem to be working best.

Details that support these findings are contained in the remainder of this Livability Report, starting with the ratings for Community Characteristics, Governance and Participation and ending with results for Scottsdale’s unique questions.

Community Characteristics

What makes a community livable, attractive and a place where people want to be?

Overall quality of community life represents the natural ambience, services and amenities that make for an attractive community. How residents rate their overall quality of life is an indicator of the overall health of a community. In the case of Scottsdale, almost all citizens rated the city as an excellent or good place to live. Respondents' reviews of Scottsdale as a place to live were higher than observed in other communities across the nation.

In addition to rating the city as a place to live, respondents rated several aspects of community quality including Scottsdale as a place to raise children and to retire, their neighborhood as a place to live, the overall image or reputation of Scottsdale and its overall appearance. Nine in 10 residents gave favorable marks to the overall image or reputation of Scottsdale, their neighborhood as a place to live, Scottsdale as a place to retire and the City's overall appearance; these ratings were higher than the national averages. Ratings for Scottsdale as a place to retire were exceptional and were among the highest ratings ever recorded in NRC's benchmarking database

Delving deeper into Community Characteristics, survey respondents rated over 40 features of the community within the eight facets of community livability. Evaluations of Economy were remarkably high, with scores higher than the national benchmark for overall economic health and overall quality of business and service establishments, and scores much higher than the national benchmark for vibrant downtown/commercial area,

shopping and employment opportunities, Scottsdale as a place to visit and Scottsdale as a place to work. Ratings for shopping opportunities were ranked 1st among all comparison communities.

All of the ratings for Recreation and Wellness were strong and higher than observed across the nation. Health and wellness opportunities received marks much higher than the national benchmark.

Residents gave above-average marks to their overall feelings of safety in Scottsdale, as well as to the overall natural environment and the overall built environment. Several other aspects received high marks, including the availability

paths and walking trails, overall quality of new development in Scottsdale, overall opportunities for education and enrichment and opportunities to participate in social events and activities.

When compared to 2016, ratings in 2018 decreased for the availability of affordable quality housing, K-12 education, the availability of affordable quality child care/preschool and adult educational opportunities (for more information see the *Trends over Time* report under separate cover). All aspects of Community Characteristics remained stable from 2016 to 2018.

Governance

How well does the government of Scottsdale meet the needs and expectations of its residents?

The overall quality of the services provided by Scottsdale as well as the manner in which these services are provided is a key component of how residents rate their quality of life. About 4 in 5 residents gave excellent or good ratings to the overall quality of City services, which was above-average. About one-third of respondents gave positive reviews to the Federal Government; this rating was on par with comparison communities nationwide.

Survey respondents also rated various aspects of Scottsdale’s leadership and governance. The overall customer service provided by Scottsdale employees received the highest marks, with 79% of respondents rating this aspect as excellent or good; however this rating decreased from 2016 to 2018. A majority of residents gave excellent or good ratings to all remaining aspects of government performance and these were similar to national averages.

Respondents evaluated over 30 individual services and amenities available in Scottsdale. All services related to Safety were positive and similar to the national benchmarks. Around 9 in 10 residents gave favorable marks to police services, fire services and ambulance or emergency medical services. Assessments of emergency preparedness decreased from 2016 to 2018.

Evaluations of Mobility were positive, with marks higher than the national averages for street repair, street cleaning and sidewalk maintenance. Assessments of traffic enforcement, street lighting, traffic signal timing and bus or transit services were similar to the national benchmarks.

Overall Quality of City Services

Scores for aspects of Natural Environment and Recreation and Wellness were favorable, with above-average ratings for yard waste pick-up, preservation of natural areas, open space (Scottsdale McDowell Sonoran Preserve), recreation programs or classes and recreation centers or facilities. Open space reviews were much higher than the national average. Assessments of yard waste pick-up improved from 2016 to 2018.

Ratings for code enforcement and public library services were strong and higher than the benchmarks. However, assessments of street cleaning and land use, planning and zoning declined from 2016 to 2018.

Participation

Are the residents of Scottsdale connected to the community and each other?

An engaged community harnesses its most valuable resource, its residents. The connections and trust among residents, government, businesses and other organizations help to create a sense of community, a shared sense of membership, belonging and history. About half of Scottsdale residents gave high marks to the overall sense of community. This assessment was similar to what was observed in comparison communities across the nation.

Almost all residents were likely to recommend living in Scottsdale to someone who asked, which was higher than the national benchmark. About 9 in 10 residents planned to remain in Scottsdale for the next five years. About one-third of residents surveyed had contacted Scottsdale employees to ask for help or information in the 12 months prior to the survey; this rate of contact lower than the national averages and declined from 2016 to 2018.

The survey included over 30 activities and behaviors for which respondents indicated how often they participated in or performed each, if at all. Participation rates within Scottsdale varied widely, making the comparison to the benchmarks useful for interpreting the results. Overall, levels of Participation in Scottsdale were on par with the national benchmarks. Fewer residents reported stocking supplies in preparation for an emergency in Scottsdale than in other communities.

Special Topics

The City of Scottsdale included four questions of special interest on The NCS. Scottsdale residents rated the importance of City initiatives, their level of agreement regarding water conservation topics, reported their use of Scottsdale McDowell Sonoran Preserve and sources of City information.

Community members rated how important it was for the City to invest in various initiatives over the next 10 years. About 8 in 10 community members felt it was essential or very important that the City repave roads and improve roadside appearance and upgrade outdated City technology such as the 911 dispatch and building permit systems. The initiative assessed as least important was building new public parking garages and improving event spaces downtown, with 4 in 10 residents saying this was essential or very important and 1 in 10 residents saying this was not at all important.

Figure 4: Importance of City Initiatives

Please rate how important, if at all, you think it is for the City of Scottsdale to invest in each of the following over the next 10 years:

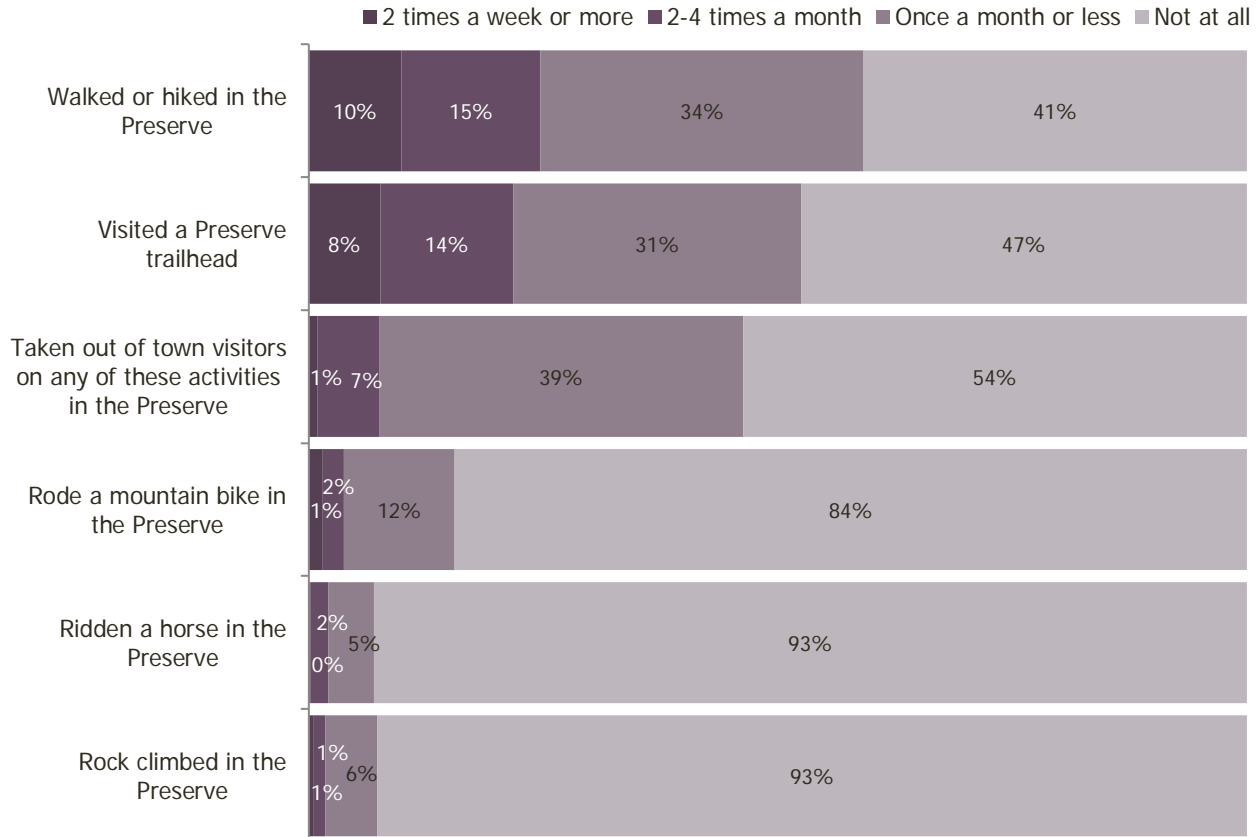

The National Citizen Survey™

Respondents were asked how often they used the Scottsdale McDowell Sonoran Preserve for different activities. The most common activities reported were walking or hiking in the Preserve and visiting a Preserve trailhead, with over half of residents using the Preserve for these activities in the 12 months prior to the survey. The least common activities reported were riding a horse and rock climbing in the Preserve.

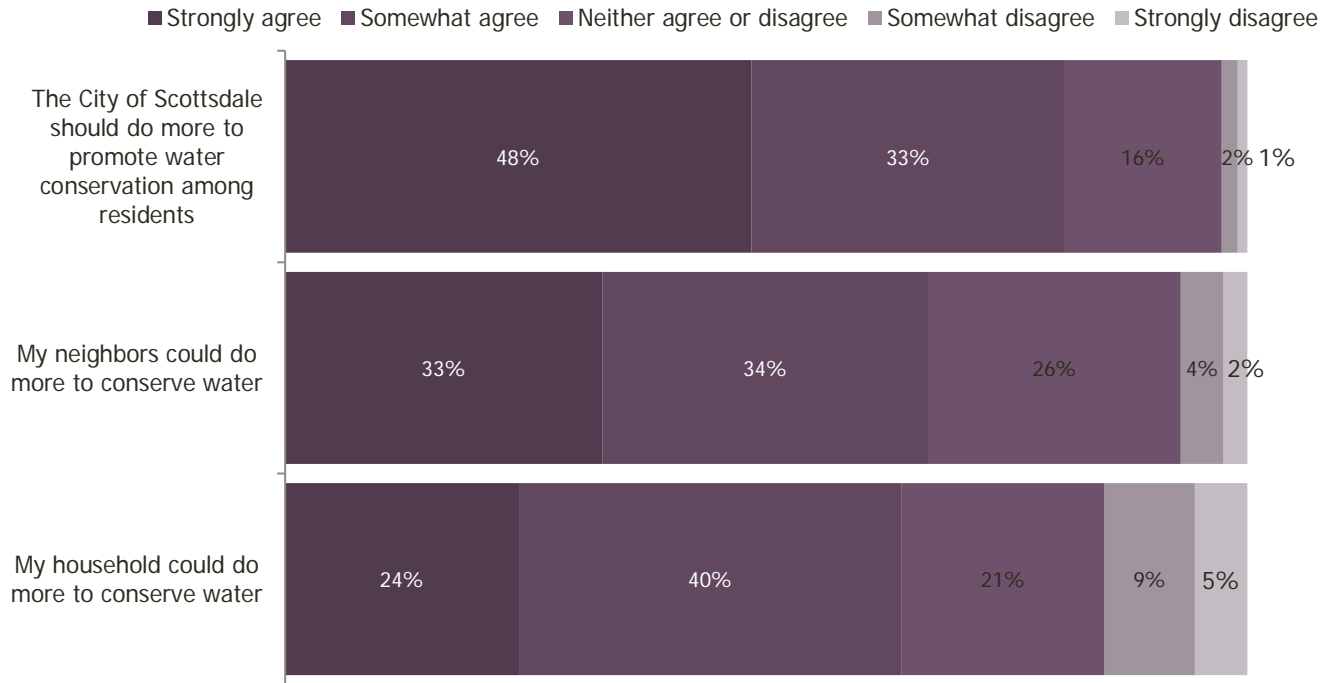

Figure 5: Activities in Scottsdale McDowell Sonoran Preserve

Please indicate how often, if at all, you have done each of the following in the last 12 months in the Scottsdale McDowell Sonoran Preserve.

Residents expressed their agreement or disagreement regarding water conservation topics. About 8 in 10 residents agreed that the City of Scottsdale should do more to promote water conservation among residents. About 7 in 10 residents agreed that their neighbors and their households could do more to conserve water.

Figure 6: Resident Opinion of Water Conservation Efforts
 To what extent do you agree or disagree with each of the following statements?

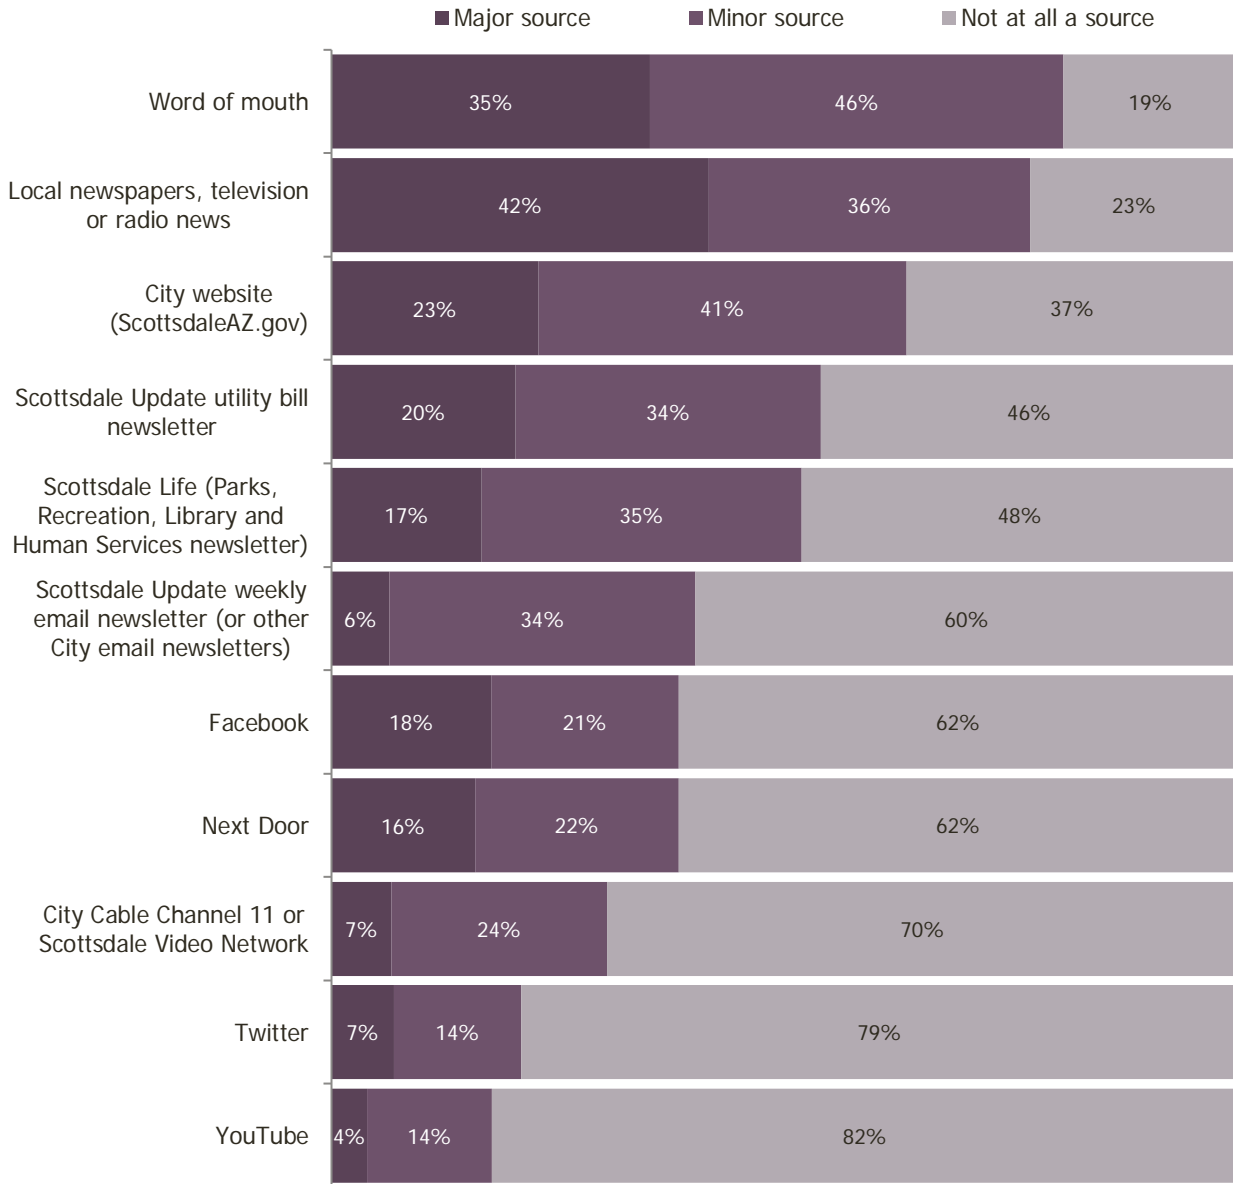

The National Citizen Survey™

When asked about sources used for obtaining information about Scottsdale, the most common sources of information were word of mouth and local newspapers, television or radio news; about 8 in 10 residents used these as a major or minor source. The least common sources of City information were Twitter and YouTube, with about 8 in 10 residents saying these were not at all a source.

Figure 7: Sources of City Information

Please indicate if each of the following is a major source, minor source or not a source of information for you about the City of Scottsdale and its activities:

Conclusions

Residents continue to enjoy a high quality of life and strong sense of safety.

Almost all community members gave high marks to the overall quality of life in Scottsdale and Scottsdale as a place to live. About 9 in 10 residents positively rated the overall image or reputation of Scottsdale, their neighborhood as a place to live and its overall appearance; ratings higher than the national averages. Evaluations of Scottsdale as a place to retire were exceptional and among the highest ever recorded in NRC's benchmarking database. The proportion of residents who were likely to recommend living in Scottsdale to someone who asked was above-average. About 9 in 10 residents planned to remain in Scottsdale for the next five years and about half positively rated the sense of community in the city. Safety was a top priority for residents. About 9 in 10 residents positively rated the overall feeling of safety in Scottsdale and felt safe in their neighborhoods and the downtown/commercial area. Evaluations of the overall feeling of safety were higher than observed elsewhere in the country. Assessments of emergency preparedness declined from 2016 to 2018 and residents' reported levels of stocking supplies in preparation for an emergency were lower than the national benchmark; highlighting a possible area of opportunity for Scottsdale.

Economy is a priority and residents applaud shopping and employment opportunities.

The economy was also identified as a priority for the community in the coming two years. Assessments within the facet of Economy were outstanding, with scores higher than the national averages for overall economic health, overall quality of business and service establishments and economic development. Residents' ratings of vibrant downtown/commercial area, shopping and employment opportunities, Scottsdale as a place to visit and Scottsdale as a place to work were much higher than what was observed elsewhere in the country. Additionally, reviews of shopping opportunities were ranked 1st among all comparison communities. About 4 in 10 residents believed the economy would have a positive impact on income, which was on par with other communities in the nation. Affordability was an asset in Scottsdale, with residents giving marks higher than the national benchmarks to availability of affordable quality food, health care and mental health care. About 4 in 10 community members gave high marks to cost of living, availability of affordable quality child care/preschool and availability of affordable quality housing; these rates were similar to the national averages. However, scores for availability of quality child care/preschool and housing declined from 2016 to 2018.

Scottsdale residents are pleased with health and wellness opportunities in their city.

Evaluations of Recreation and Wellness in Scottsdale were very strong. Assessments of availability of preventive health services, recreational opportunities and fitness opportunities were higher than the national benchmarks. About 9 in 10 community members gave high marks to recreation programs or classes and recreation centers or facilities; these scores were also above-average. Ratings for health and wellness opportunities were much higher than the national averages and were ranked 3rd among comparison communities. About half of respondents had visited and walked or hiked in Scottsdale McDowell Sonoran Preserve in the 12 months prior to the survey. Yet, about 9 in 10 had not used the Preserve at all for mountain biking, horseback riding and rock climbing.

Summary

The National Citizen Survey™ (The NCS™) is a collaborative effort between National Research Center, Inc. (NRC) and the International City/County Management Association (ICMA). The survey and its administration are standardized to assure high quality research methods and directly comparable results across The NCS communities. The NCS captures residents’ opinions within the three pillars of a community (Community Characteristics, Governance and Participation) across eight central facets of community (Safety, Mobility, Natural Environment, Built Environment, Economy, Recreation and Wellness, Education and Enrichment and Community Engagement). This report summarizes Scottsdale’s performance in the eight facets of community livability with the “General” rating as a summary of results from the overarching questions not shown within any of the eight facets. The “Overall” represents the community pillar in its entirety (the eight facets and general).

By summarizing resident ratings across the eight facets and three pillars of a livable community, a picture of Scottsdale’s community livability emerges. Below, the color of each community facet summarizes how residents rated each of the pillars that support it – Community Characteristics, Governance and Participation. When most ratings were higher than the benchmark, the color is the darkest shade; when most ratings were lower than the benchmark, the color is the lightest shade. A mix of ratings (higher and lower than the benchmark) results in a color between the extremes.

General aspects of Community Characteristics tended to be higher than the national benchmarks. Other facets of Community Characteristics that were higher than observed in other communities in the country were Natural Environment, Built Environment, Economy and Recreation and Wellness. In Governance, evaluations of Natural Environment, Economy, Recreation and Wellness and Education and Enrichment tended to be higher than the national averages. Levels of Participation tended to be positive and similar to comparison communities. This information can be helpful in identifying the areas that merit more attention.

Summary

The National Citizen Survey™ (The NCS™) is a collaborative effort between National Research Center, Inc. (NRC) and the International City/County Management Association (ICMA). The survey and its administration are standardized to assure high quality research methods and directly comparable results across The NCS communities. The NCS captures residents' opinions within the three pillars of a community (Community Characteristics, Governance and Participation) across eight central facets of community (Safety, Mobility, Natural Environment, Built Environment, Economy, Recreation and Wellness, Education and Enrichment and Community Engagement). This report discusses trends over time, comparing the 2018 ratings for the City of Scottsdale to its previous survey results in 2003, 2004, 2006, 2010, 2013 and 2016. Additional reports and technical appendices are available under separate cover.

Trend data for Scottsdale represent important comparison data and should be examined for improvements or declines. Deviations from stable trends over time, especially, represent opportunities for understanding how local policies, programs or public information may have affected residents' opinions.

Meaningful differences between survey years have been noted within the following tables as being "higher" or "lower" if the differences are greater than eight percentage points between the 2016 and 2018 surveys, otherwise the comparisons between 2016 and 2018 are noted as being "similar." Additionally, benchmark comparisons for all survey years are presented for reference. Changes in the benchmark comparison over time can be impacted by various trends, including varying survey cycles for the individual communities that comprise the benchmarks, regional and national economic or other events, as well as emerging survey methodologies.

Overall, ratings in Scottsdale for 2018 generally remained stable. Of the 131 items for which comparisons were available, 119 items were rated similarly in 2016 and 2018, 11 items showed a decrease in ratings and one item showed an increase in ratings. Notable trends over time included the following:

- Within the pillar of Community Characteristics, most ratings remained stable from 2016 to 2018. Most ratings decreases were concentrated in the facet of Education and Enrichment, with K-12 education, the availability of affordable quality child care/preschool and adult educational opportunities receiving lower marks. The availability of affordable quality housing also received less positive ratings in 2018 compared to 2016.
- In Governance, assessments of yard waste pick-up improved from 2016 to 2018. There were four aspects for which ratings decreased, including emergency preparedness; land use, planning and zoning, street cleaning, and overall customer service by Scottsdale employees.
- From 2016 to 2018, levels of Participation for most items remained stable in Scottsdale. Fewer residents reported they had carpooled or had contacted the City of Scottsdale for help or information. Community members' evaluations of the sense of community in Scottsdale also decreased.

About

The National Citizen Survey™ (The NCS™) is a collaborative effort between National Research Center, Inc. (NRC) and the International City/County Management Association (ICMA). The survey and its administration are standardized to assure high quality research methods and directly comparable results across The NCS communities. Communities conducting The NCS can choose from a number of optional services to customize the reporting of survey results. Scottsdale’s Comparisons by Demographic Subgroups is part of a larger project for the City and additional reports are available under separate cover. This report discusses differences in opinion of survey respondents by age, sex, housing tenure, housing unit type and race and ethnicity.

Understanding the Tables

For most of the questions, one number appears for each question. Responses have been summarized to show only the proportion of respondents giving a certain answer; for example, the percent of respondents who rated the quality of life as “excellent” or “good,” or the percent of respondents who participated in an activity at least once. It should be noted that when a table that does include all responses (not a single number) for a question that only permitted a single response does not total to exactly 100%, it is due to the common practice of percentages being rounded to the nearest whole number.

The subgroup comparison tables contain the crosstabulations of survey questions by selected respondent characteristics. Chi-square or ANOVA tests of significance were applied to these breakdowns of survey questions. A “p-value” of 0.05 or less indicates that there is less than a 5% probability that differences observed between groups are due to chance; or in other words, a greater than 95% probability that the differences observed in the selected categories of the sample represent “real” differences among those populations. As subgroups vary in size and each group (and each comparison to another group) has a unique margin of error, statistical testing is used to determine whether differences between subgroups are statistically significant. Statistical testing was not performed on multiple response questions.

Each column in the following tables is labeled with a letter for each subgroup being compared. The “Overall” column, which shows the ratings for all respondents, also has a column designation of “(A)”, but no statistical tests were done for the overall rating.

For each pair of subgroups ratings within a row (a single question item) that has a statistically significant difference, an upper case letter denoting significance is shown in the cell with the larger column proportion. The letter denotes the subgroup with the smaller column proportion from which it is statistically different. Subgroups that have no upper case letter denotation in their column and that are also not referred to in any other column were not statistically different.

For example, in Table A below, respondents age 55 and over (C) gave significantly higher rating to the overall quality of life than those age 18 to 34 (A) and 35 to 54 (B), as denoted by the “A B” listed in the cell of the ratings for those 55+. This was also true of women (A) over men (B); people who were white alone, not Hispanic (A) over those who were Hispanic and/or other race (B); homeowners (B) over renters (A); and those living in detached housing (A) over those living in attached housing (B).

Figure 1: Community Characteristics – General (Example Only)

Percent rating positively (e.g., excellent/good)	Age			Sex		Race/ethnicity		Housing tenure		Housing unit type		Overall (A)
	18-34 (A)	35-54 (B)	55+ (C)	Female (A)	Male (B)	White alone, not Hispanic (A)	Hispanic and/or other race (B)	Rent (A)	Own (B)	Detached (A)	Attached (B)	
The overall quality of life in ABC	76%	78% A	82% A B	79% B	77%	81% B	71%	73%	81% A	79% B	76%	78%
Overall image or reputation of ABC	69%	69%	73% A B	71% B	69%	72% B	64%	68%	71% A	69%	71% A	70%
ABC as a place to live	81%	84% A	87% A B	85% B	83%	86% B	78%	79%	86% A	85% B	82%	84%

Findings

Notable differences between demographic subgroups included the following:

- Community members under the age of 35 tended to give higher ratings to several aspects of the Scottsdale government, including the overall direction that Scottsdale is taking, overall confidence in Scottsdale government and generally acting in the best interest of the community. Residents younger than 35 were also more likely than their counterparts to positively rate several Safety-related services. Community members aged 35 or older were more likely to participate in many aspects of Community Engagement.
- Few differences in opinion by gender were observed. Where differences were noted, female residents tended to give higher ratings than male residents to aspects of Community Characteristics and Governance.
- Residents living in detached homes tended to give more positive ratings than those who lived in attached homes to general aspects of Community Characteristics (such as the overall quality of life in Scottsdale) and to Natural Environment-related services. However, residents living in attached housing were more likely than others to favorably rate aspects of public trust (such as overall confidence in City government and being honest).
- Residents who rented their homes gave higher marks than those who owned their homes to several general aspects of livability such as the overall ease of travel, quality of the overall natural environment and overall built environment. Homeowners tended to give more positive marks to Natural Environment-related services such as garbage collection and drinking water. Homeowners were also more likely than renters to have participated in aspects of Community Engagement such as contacting elected officials, interacting with neighbors or attending local public meetings.
- Residents who were white alone, not Hispanic were more likely to award positive ratings to services related to the Built Environment such as sewer services, utility billing and code enforcement, than residents who were Hispanic and/or another race. Other patterns in resident responses by race and ethnicity did not emerge.

Summary

The National Citizen Survey™ (The NCS™) is a collaborative effort between National Research Center, Inc. (NRC) and the International City/County Management Association (ICMA). The survey and its administration are standardized to assure high quality research methods and directly comparable results across The NCS communities. Communities conducting The NCS can choose from a number of optional services to customize the reporting of survey results. Scottsdale's Comparisons by Geographic Subgroups is part of a larger project for the City and additional reports are available under separate cover. This report discusses differences in opinion of survey respondents by geographic subarea (South of Indian Bend Road, North of Indian Bend Road and South or West of CAP Canal, and North or East of CAP Canal).

Understanding the Tables

For most of the questions, one number appears for each question. Responses have been summarized to show only the proportion of respondents giving a certain answer; for example, the percent of respondents who rated the quality of life as “excellent” or “good,” or the percent of respondents who participated in an activity at least once. It should be noted that when a table that does include all responses (not a single number) for a question that only permitted a single response does not total to exactly 100%, it is due to the common practice of percentages being rounded to the nearest whole number.

The subgroup comparison tables contain the crosstabulations of survey questions by geographic subarea. Chi-square or ANOVA tests of significance were applied to these breakdowns of survey questions. A “p-value” of 0.05 or less indicates that there is less than a 5% probability that differences observed between groups are due to chance; or in other words, a greater than 95% probability that the differences observed in the selected categories of the sample represent “real” differences among those populations. As subgroups vary in size and each group (and each comparison to another group) has a unique margin of error, statistical testing is used to determine whether differences between subgroups are statistically significant. Statistical testing was not performed on multiple response questions.

Each column in the following tables is labeled with a letter for each subgroup being compared. The “Overall” column, which shows the ratings for all respondents, also has a column designation of “(A)”, but no statistical tests were done for the overall rating.

For each pair of subgroup ratings within a row (a single question item) that has a statistically significant difference, an upper case letter denoting significance is shown in the cell with the larger column proportion. The letter denotes the subgroup with the smaller column proportion from which it is statistically different. Subgroups that have no upper case letter denotation in their column and that are also not referred to in any other column were not statistically different.

For example, in Table A below, respondents in Districts 1 (A) and 2 (B) gave significantly lower ratings to overall quality of life than respondents in Districts 3 (C) and 4 (D), as denoted by the “A B” listed in the cell of the ratings for Districts 3 and 4. The overall quality of life rating in District 4 (D) also was significantly lower than that of District 3 (C) (as indicated by the “D” in the rating for District 3).

Figure 1: Community Characteristics – General (Example Only)

Percent rating positively (e.g., excellent/good)	District				Overall (A)
	District 1 (A)	District 2 (B)	District 3 (C)	District 4 (D)	
The overall quality of life in ABC	73%	74%	79% A B D	76% A B	78%
Overall image or reputation of ABC	65%	66%	69% A B	71% A B C	70%
ABC as a place to live	80%	81%	85% A B D	82% A B	84%

Three geographic subareas were tracked for comparison and the number of completed surveys for each are in the figure below.

Figure 2: Geographic Areas

Area	Number of Completed Surveys
South of Indian Bend Road	117
North of Indian Bend Road and South or West of CAP Canal	92
North or East of CAP Canal	96

Findings

Notable differences between geographic subareas included the following:

- Residents living South of Indian Bend Road tended to give higher marks to ease of travel by public transportation in Scottsdale than residents living in other areas.
- Community members living South of Indian Bend Road tended to give lower ratings to the overall appearance of Scottsdale, quality of overall natural environment and several City services (including police, animal control and sewer services) compared to residents living elsewhere.
- Residents living South of Indian Bend Road were less likely than others to give positive ratings to drinking water services and drinking water taste, and also less likely to have made efforts to conserve water in the past 12 months. They were also less likely than respondents who lived in other areas to believe that their household could do more to conserve water.
- Respondents who lived South of Indian Bend Road were less likely than their counterparts to have visited a public library or Scottsdale recreation centers and more likely to have observed a code violation.
- Residents living North or East of CAP Canal tended to rate ease of travel by bicycle and their feelings of safety in Scottsdale’s downtown/commercial area during the day less favorably than other residents. They were also less likely to have reported using bus or other public transportation instead of driving.
- Compared to residents in other areas, residents living North or East of CAP Canal were more likely to have done several activities in Scottsdale McDowell Sonoran Preserve, including riding a mountain bike, rock climbing and riding a horse.

About this Report

As part of its participation in The National Citizen Survey™, the City of Scottsdale conducted a mailed survey of 1,600 residents. Surveys were mailed to randomly selected households in mid-November 2018 and data were collected through mid-January 2019. After the official data collection period was underway (see the report, *The National Citizen Survey: Community Livability Report, Scottsdale, AZ, 2018*), the City made available a web-based survey to its residents through a link on the City's website. Visitors to the site were able to complete the survey from late December 2018 to early February 2019 and 104 surveys were received.

This report contains the results of this administration of the web-based survey that have not been weighted to current population estimates of Scottsdale.

Complete Survey Responses

The following pages contain a complete set of responses to each question on the survey, excluding the “don’t know” responses. The percent of respondents giving a particular response is shown followed by the number of respondents (denoted with “N=”).

Responses excluding “don’t know”

Table 1: Question 1

Please rate each of the following aspects of quality of life in Scottsdale:	Excellent		Good		Fair		Poor		Total	
	%	N	%	N	%	N	%	N	%	N
Scottsdale as a place to live	56%	N=58	35%	N=36	10%	N=10	0%	N=0	100%	N=104
Your neighborhood as a place to live	57%	N=59	33%	N=34	8%	N=8	2%	N=2	100%	N=103
Scottsdale as a place to raise children	43%	N=33	40%	N=31	13%	N=10	4%	N=3	100%	N=77
Scottsdale as a place to work	43%	N=34	43%	N=34	13%	N=10	3%	N=2	100%	N=80
Scottsdale as a place to visit	64%	N=65	32%	N=33	2%	N=2	2%	N=2	100%	N=102
Scottsdale as a place to retire	48%	N=48	31%	N=31	15%	N=15	5%	N=5	100%	N=99
The overall quality of life in Scottsdale	49%	N=51	41%	N=43	8%	N=8	2%	N=2	100%	N=104

Table 2: Question 2

Please rate each of the following characteristics as they relate to Scottsdale as a whole:	Excellent		Good		Fair		Poor		Total	
	%	N	%	N	%	N	%	N	%	N
Overall feeling of safety in Scottsdale	48%	N=49	41%	N=42	7%	N=7	4%	N=4	100%	N=102
Overall ease of getting to the places you usually have to visit	17%	N=17	52%	N=53	23%	N=23	9%	N=9	100%	N=102
Quality of overall natural environment in Scottsdale	44%	N=45	43%	N=44	9%	N=9	4%	N=4	100%	N=102
Overall "built environment" of Scottsdale (including overall design, buildings, parks and transportation systems)	20%	N=20	39%	N=39	31%	N=31	11%	N=11	100%	N=101
Health and wellness opportunities in Scottsdale	44%	N=43	40%	N=39	12%	N=12	4%	N=4	100%	N=98

Purpose of the User Guide

As a participant in The National Citizen Survey™ (The NCS™), you are among an elite group of communities that conduct resident surveys. Communities often use the results of The NCS to:

- **Envision** Make strategic plans and set goals
- **Engage** Partner with residents, other governments, private sector and community-based organizations
- **Earmark** Alter budgets, personnel or services
- **Educate** Communicate and reach out to residents to inform, educate and advocate
- **Enact** Create, alter and remove policies to promote community strengths
- **Evaluate** Track strengths and problems, dig more deeply and evaluate progress

The purpose of this User Guide is to provide you with an overview of the various products you have received related to your survey results, and to describe how to dive in and understand the data that are provided in these products.

Your community, including the elected officials and government staff, should dig into data relevant to their missions, discuss the findings and create action plans. Residents expect their leaders to act on the survey results they receive. By acting on survey results, community leaders build credibility with residents. This credibility leads to heightened public trust which, in turn, makes it more likely that residents will support expenditures and resource allocations recommended by their councils, commissions or staff. Proper expenditure of resources leads to better communities.

The NCS Background

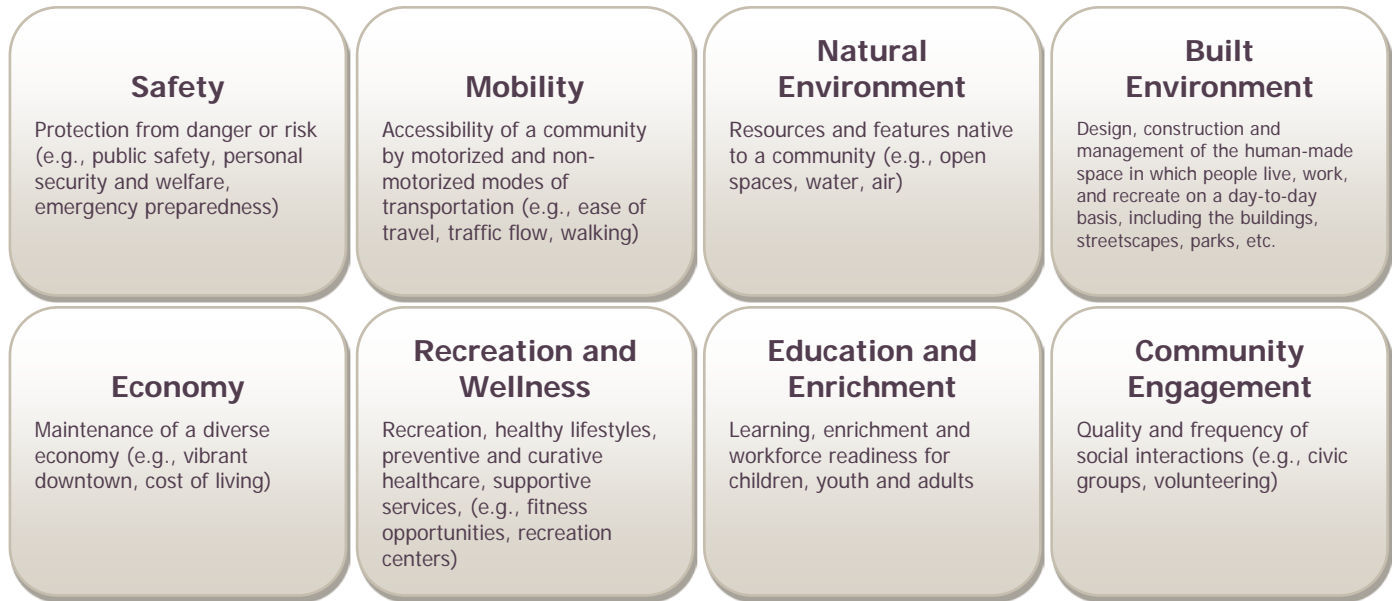

National Research Center, Inc. (NRC) developed The NCS as a low-cost, comprehensive, statistically valid survey solution for local governments eager to find out what their residents think about their communities. The NCS is not just a survey; it is a service that encompasses the entire survey research process - scheduling, questionnaire development, sample selection, data collection, analysis and reporting. In partnership with the International City/County Management Association (ICMA), The NCS has been administered hundreds of times in numerous U.S. cities, counties, towns, villages and boroughs.

The NCS assesses aspects of community life, local government service quality and resident participation in community activities. The results, based on resident perceptions, describe the areas where community members themselves believe things are going well and shed light on the areas that could benefit from improvement.

What Does The NCS Measure?

Broadly, The NCS measures your community’s “livability.” A great many definitions have been made for community livability,¹ including one from the Partners for Livable Communities, calling it “the sum of the factors that add up to a community’s quality of life.”² Staff at NRC examined the extensive research that has been done about community livability and many of the models that have been developed to describe the components of livable communities.³ Eight facets of community livability were distilled from our synthesis of this research: Safety, Mobility, the Natural Environment, the Built Environment, the Economy, Recreation and Wellness, Education and Enrichment and Community Engagement. The NCS questionnaire includes individual items that act as indicators of community quality within each of the eight facets – and, split in a different way, they form three “pillars” of community quality: Community Characteristics, Governance and Participation.

The Eight Facets of Livable Communities

The Three Pillars of Livable Communities

¹ Many examples are shown at http://www.camsys.com/kb_experts_livability.htm

² Source: Partners for Livable Communities, <http://www.livable.org/about-us/what-is-livability>

³ See, for example: http://livable.nonprofitsoapbox.com/storage/documents/board_resources/BOT_Meetings/2010/4ExecCommNov5/Grand_Alliance_doc_for_EC.pdf; http://www.sustainable.org/images/stories/pdf/Placemaking_v1.pdf; http://www.who.int/ageing/publications/Global_age_friendly_cities_Guide_English.pdf

Other sectors that influence community quality include the businesses, non-profit agencies, fraternal or service organizations (e.g., Kiwanis, Rotary, Lions and more) and other community groups (such as homeowners or neighborhood associations, etc.) as well as other nearby local governments or other levels of government. They are important target audiences for receiving and acting on The NCS results.

Because much of what The NCS measures is quality – quality of community life, services and connection – it is common for community leaders to conclude that their locale must excel in every facet of livability. While leaders may feel compelled to strive to be equally strong in all areas of community life, such a strategy is rarely feasible or even desirable. Different communities have different strengths and identities. These strengths and definitions of the community should be noted by all those reviewing the results. Less desirable ratings for some indicators should not automatically be seen as negative for a community, but instead a reflection of the community's resources and priorities which wisely may be spent on areas that matter more. Not all indicators that show less achievement are a call to action, just as not all indicators that are strong should become a gateway to complacency. Those viewing The NCS results, and in particular those charged with creating plans based on the results, should consider their community's essence and priorities, and should choose to make improvements or maintain excellence in areas that support the identity they desire. Meeting your definition of success in the areas deemed most important is the ultimate goal – and one that The NCS helps measure – even if all levels of success are not equal.

Using Your Reports

Report Documents

Instead of a single, heavy document that can be difficult to navigate and share, The NCS results are reported in multiple formats and lengths, each with varying levels of detail to ensure your different stakeholder groups get the right information to meet their needs. The Basic Service of The NCS includes each of the following documents:

- Community Livability Report
- Dashboard Summary of Findings
- Technical Appendices
- Trends over Time (if you have administered The NCS before)

Depending on the additional services you chose as part of your research project, you may also receive additional reports, such as:

- Demographic Subgroup Comparisons
- Geographic Subgroup Comparisons
- Report of Open-ended Questions
- Presentation slideshow (shown at in-person presentation of results and provided to you for your own uses)

This User Guide describes these reports, how to interpret the data and how to dig deeper to ensure everyone – you, government staff leadership, line staff, elected officials, residents, business owners and community organizations – get the most out of The NCS results.

Report Types

When assembled together, these reports build on and reinforce each other, while separately, they provide the flexibility for targeted reporting to specific audiences.

Community Livability Report • This report is the most universal and summarizes all the results and key findings. The Community Livability Report is brief, attractive and accessible, making it a central public document.

Dashboard Summary of Findings • This report offers a simplified (“rolled up”) quantitative view of the data, as well as comparison details for each question (the relationship to the benchmark and over time, if this is not the first iteration of the survey).

Technical Appendices • The appendices include the details about survey methods, individual response options selected for each question – with and without the “don’t know” option – and detailed benchmark results. This document speaks to the credibility of data and the most granular detail of results.

Trends over Time • This report reveals how resident perspectives and behaviors have changed across two or more administrations of The NCS. The report offers a high level view of how rankings have changed as well as relative position to the benchmark including all administrations of The NCS.

Guide to Understanding and Using Your Reports • The Guide to Understanding and Using Your Reports (this document) is written simply so that the survey sponsors receive guidance about how to understand all aspects of the reports, and also so that sponsors can explain to others how the reports are organized and what they mean.

Presentation • An in-person presentation by NRC's independent researchers will offer an engaging overview of the findings – revealing important patterns without getting lost in the detail – at a Council meeting (either formal or work session). The PowerPoint slideshow can be reused for other audiences, including civic clubs, business and non-profit organizations and the press. Presentation by the unbiased survey research team offers the neutrality that is hard to garner when staff themselves present survey findings.

Subgroup Comparisons • Both demographic and geographic comparison options are available. Such information can be especially useful as programs are considered for different parts of a community or outreach is planned to educate different community groups.

Open-ended Questions • Residents' own words add flavor to the survey results and a quantitative grouping of similarly themed comments gives a sense of common ideas.

Report Dissemination

Distributing the results and communicating the key findings engages audiences.

Audiences and Stakeholders

Residents • Make the reports available to the public via your website. Share the results at a public meeting, being sure to advertise the event. A full presentation of the results (either by NRC or your own staff) with discussion of results among elected officials highlights the transparency of findings. If independence of the findings is particularly important in your community, working with NRC to make the presentation of results will be particularly effective.

Department Managers and Line Staff • Managers and staff will examine ratings most closely aligned to their work. Make a plan to disseminate results to line staff (e.g., through a series of small group meetings). Staff should be encouraged to identify specific areas where action is suggested – including further research as well as service enhancements or partnerships outside of the organization. These suggestions could be sent to the department heads who will meet to discuss action options with the chief administrative officer.

Elected officials • Elected officials benefit most from advance distribution of survey reports prior to public presentation and discussion. Ask elected officials to read the survey documents and funnel questions to staff who then can get assistance with answers from NRC professionals, when needed. Staff should develop an approach to action that can be presented to council. This way staff will be prepared when the inevitable council question is asked of the manager, "What do you plan to do with these results so that they don't just sit on a shelf?"

Non-profits and Businesses • While local governments sponsor The NCS, it is not just for staff and elected officials. It is a document to engage the entire community. Many of the findings of the survey will be relevant to the non-profit and business sectors and many community improvements will rest on the shoulders of these sectors as much as on government. Convene a meeting of business and non-profit leaders to release results and begin a discussion of actions to improve resident attitudes and behaviors. This could be a town hall-style meeting or a special invitation lunch with elected officials.

Press/Media • Getting in front of your results means controlling how and when results are shared with the press. Whether your relationship with the local news media is cooperative or contentious, you should declare your intentions for the results even before the survey is conducted – then reinforce those intentions once you have the results. Let the press know that there are no bad results and that your community conducts The NCS because it intends to learn and improve like the best businesses. Certainly social media outlets also permit you to express your intentions for results and to interpret the findings for any of your followers. (And do not forget to link subsequent decisions to what you learned from the survey.)

Choosing a Report Audience

You can follow or adapt to your needs NRC’s recommendations for sharing The NCS reports with different stakeholder groups in your community. There is no reason to withhold any report from any individual or stakeholder group, but if targeting the right information to the right audience is seen to be of value, we believe that these distinctions among audiences will make the first pass at distributing results most effective.

○=Optional

These stakeholder groups may wish to “drill down” into the results most meaningful or pertinent to their missions. Those wishing to drill down should review the questionnaire first and decide which survey items are relevant to their mission – choosing from not only specific municipality-provided services, but also those “community outcomes” that they wish to impact. The Dashboard Summary of Findings and Community Livability Report provide an overview, while the Technical Appendices provide the detailed survey responses and benchmark results. The Trends over Time can show how stakeholders’ efforts have impacted the community over the years. Demographic and Geographic Subgroup Comparisons reports can help to point out on whom and where impacts have been felt to lesser and greater degrees.

Community Livability Report

Using the model of the eight facets of community livability within the three pillars of community, The NCS Community Livability report is divided into seven sections:

- About
- Quality of Life
- Community Characteristics
- Governance
- Participation
- Special Topics
- Conclusions

About • This section provides background on The NCS and community livability with brief descriptions of the survey methods.

Quality of Life • This section of the report highlights areas of community strength and challenge, as well as identifying community characteristics most important to your residents' assessments of their quality of life. A summary of benchmark comparisons is presented by the eight community livability facets helping communities to focus on areas that may provide “bigger bang for your buck.”

Community Characteristics • This section of the report describes residents' ratings of the characteristics that make a community livable, attractive and a place where people want to be.

Governance • This section of the report evaluates how well the local government delivers services and meets the needs and expectations of its residents.

Participation • This section of the report looks at how connected residents are to the community and each other.

Special Topics • This section includes the custom or special questions you may have included on your survey.

Conclusions • Your report ends with a summary of key findings.

For the most part, the “percent positive” is reported in the report's charts. The percent positive is the combination of the top two most positive response options (i.e., “excellent” and “good,” “very safe” and “somewhat safe”). For question that ask about behavior (e.g., asked on a yes/no scale or frequency scale like “never,” “rarely,” “sometimes,” “usually,” or “always”) we show a combination of responses that reflects at least some behavior (e.g., percent “yes” or “always” and “usually”).

On many of the questions in the survey, respondents could answer “don't know,” but these “don't know” responses have been excluded from the analyses shown in the report. In other words, the tables and charts display the responses from respondents who had an opinion about a specific item. Appendix A of the Technical Appendices provides the complete set of survey frequencies, with and without “don't know” responses. The User Guide section, *Understanding Survey Research* (starting on page 17) describes how and why we remove the “don't know” responses from our analyses.

Most of the charts in your Community Livability report have been color-coded to indicate how your results compare to national benchmarks, with individual survey items grouped within the eight facets of Community Livability. At a glance, you can see how your results compare to not only each other, but to

national benchmark communities, as well. Detailed benchmark results are provided in Appendix B of the Technical Appendices and include such additional information as your rank among the comparison communities. If you chose to have custom benchmark comparisons made, the results appear in this appendix as well.

Dashboard Summary of Findings

The Dashboard Summary of Findings summarizes resident ratings across the eight facets and three pillars of a livable community. The Dashboard Summary chart displays your overall performance in each facet based on each survey item’s comparison to the benchmark. When most ratings were higher than the benchmark, the color is dark purple; when most ratings were lower than the benchmark, the color is the lightest purple. A mix of ratings (higher and lower than the benchmark) results in a color between the extremes.

	Community Characteristics			Governance			Participation		
	Higher	Similar	Lower	Higher	Similar	Lower	Higher	Similar	Lower
Overall	20	25	7	28	12	6	5	14	14

	Similar
	Lower

The Detailed Dashboard displays for each item on the survey, its comparison to the benchmark and the percent positive for the current year, and if applicable, how the current year’s rating compares to the previous year’s rating (higher, similar or lower). Examination of how areas are trending over time and how they compare to the benchmark can be helpful in identifying the areas that merit more attention.

Technical Appendices

Appendix A: Complete Survey Responses

The first appendix in this document shows the responses to each question on the survey in two ways. Included first are the responses excluding any “don’t know” responses and second are the responses including the “don’t know” responses. We show both the percent of respondents giving a particular response followed by the number of respondents (denoted with “N=”). Every table in the appendix is numbered, to ease its reference in additional documentation or reports you may develop. The complete question wording that was used on the survey is also displayed in every table. This permits readers to review the results in their entirety without having to cross-reference the survey instrument.

High “don’t know” (typically 20% or greater) responses can suggest a need for additional communication or outreach in the community, especially if the high “don’t know” responses are related to underused services.

Responses excluding don't know

ABC as a place to visit	71%	N=214	22%	N=66	2%	N=5	4%	N=12	2%	N=5	100%	N=302
ABC as a place to retire	31%	N=97	23%	N=72	14%	N=44	10%	N=31	21%	N=64	100%	N=308
The overall quality of life in ABC	54%	N=187	34%	N=117	5%	N=18	4%	N=15	2%	N=7	100%	N=344

For some questions, respondents are permitted to select more than one response. When some respondents are counted in multiple categories, the total will likely exceed 100%. In these cases, those multiple response questions will have the appropriate notation below the table.

Table 55: Question D14

What is your race? (Mark one or more races to indicate what race(s) you consider yourself to be.)	Percent	Number
American Indian or Alaskan Native	4%	N=15
Asian, Asian Indian or Pacific Islander	6%	N=20
Black or African American	10%	N=35
White	86%	N=298
Other	15%	N=52

Total may exceed 100% as respondents could select more than one option.

Appendix B: Benchmark Comparisons

What Benchmarks Are

Benchmarks are comparison data that provide context for your ratings. In Appendix B, your detailed benchmark results are displayed in a table of five columns. The first column is the survey item for which the comparisons have been provided. The second column is your community’s percent positive. The third column is the rank assigned to your rating among communities where a similar question was asked. The fourth column is the number of communities that asked a similar question. The fifth and final column shows how your rating compares to the other communities in the benchmarking database. In that final column, your results are noted as being “higher” than the benchmark, “lower” than the benchmark or “similar” to the benchmark, meaning that the average rating given by residents of your community is statistically similar to or different (greater or lesser) than the benchmark. More extreme differences are noted as “much higher” or “much lower.”

National Benchmark Comparisons

Table 1: Community Characteristics General

	Percent positive	Rank	Number of communities in comparison	Comparison to benchmark
The overall quality of life in ABC	83%	98	286	Similar
Overall image or reputation of ABC	84%	67	315	Much higher
ABC as a place to live	78%	118	255	Similar
Your neighborhood as a place to live	89%	80	374	Higher
ABC as a place to raise children	75%	135	325	Lower
ABC as a place to retire	72%	129	298	Much lower
Overall appearance of ABC	70%	168	354	Similar

We also provide a list of the communities included in your comparison with their population according to the U.S. Census Bureau. The communities in the national database represent a wide geographic and population range; many communities find a custom comparison that targets specific geographies or populations to be useful.

Communities included in national comparisons

The communities included in ABC’s comparisons are listed on the following pages along with their population according to the 2010 Census.

Abilene city, KS.....	6,844	Cambridge city, MA.....	105,162
Adams County, CO.....	441,603	Cape Coral city, FL.....	154,305
Airway Heights city, WA.....	6,114	Cape Girardeau city, MO.....	37,941
Albany city, GA.....	77,434	Cartersville city, GA.....	19,731
Albany city, OR.....	50,158	Carver County, MN.....	91,042
Albemarle County, VA.....	98,970	Cary town, NC.....	135,234
Albert Lea city, MN.....	18,016	Casa Grande city, AZ.....	48,571
Altoona city, IA.....	14,541	Casper city, WY.....	55,316
Ambridge borough, PA.....	7,050	Castle Pines North city, CO.....	10,360
Ames city, IA.....	58,965	Castle Rock town, CO.....	48,231
Andover CDP, MA.....	8,762	Cedar Falls city, IA.....	39,260
Ankeny city, IA.....	45,582	Cedar Rapids city, IA.....	126,326

What Benchmarks Are Not

Benchmarks do not tell you what you need to fix. In this way, benchmarks are not like blood tests that carry a range, often narrow, within which you are considered to be healthy and outside of which you could be sick. A local score that is lower than scores typically seen in other places may indicate nothing more than community sentiment that resonates. For example, a suburb located near a large metropolitan center many not be seen to have as strong an economy as other places. This residential suburb’s commercial areas are not seen to be as vibrant as other places, may have a higher cost of living, fewer jobs and may have ceded downtown activities to a nearby metro area that has much higher density and more entertainment opportunities. A lower benchmark rating for “economy” simply offers specifics to the community identity which residents and leaders may feel no need to ameliorate. Instead

this hypothetical community may want to focus its resources on sustaining or strengthening its image as a safe place with many recreation opportunities and ease of travel by car and light rail.

How to Use Benchmarks

Many of the charts and tables in The NCS reports have been color-coded to indicate how your results compare to national benchmarks.

Benchmark comparisons often are used for performance measurement. Communities use the comparative information to help interpret their own citizen survey results, to create or revise community plans, to evaluate the success of policy or budget decisions and to measure local government performance. Taking the pulse of the community has little meaning without knowing what pulse rate is too high and what is too low. When surveys of service satisfaction turn up “good” citizen evaluations, jurisdictions need to know how others rate their services to understand if “good” is good enough. Furthermore, in the absence of national or peer community comparisons, a jurisdiction is left with comparing its fire protection rating to its street maintenance rating. That comparison is unfair. Streets always lose to fire. More important and harder questions need to be asked; for example, how do residents’ ratings of fire service compare to opinions about fire service in other communities?

A police department that provides the fastest and most efficient service – one that closes most of its cases, solves most of its crimes and keeps the crime rate low – still has a problem to fix if the perception of residents in the community it intends to protect is not so strong. The benchmark data can help that police department – or any department – to understand how well citizens think it is doing. Without the comparative data, it would be like bowling in a tournament without knowing what the other teams are scoring. NRC recommends that citizen opinion be used in conjunction with other sources of data about budget, personnel and politics to help managers know how to respond to comparative results.

NRC’s database of comparative resident opinion is comprised of resident perspectives gathered in surveys from over 500 communities whose residents evaluated the same kinds of topics on The NCS. The comparison evaluations are from the most recent survey completed in each community; most communities conduct surveys every year or in alternating years. NRC adds the latest results quickly upon survey completion, keeping the benchmark data fresh and relevant. The Basic Service includes national benchmark comparisons. If you chose a custom benchmarks comparison as an additional service to the basic NCS, these comparison will appear in this appendix, as well.

Jurisdictions in the benchmark database are distributed geographically across the country and range from small to large in population size. Data come from tens of thousands of individual evaluations of community quality, service delivery and engagement. Despite the differences in jurisdiction characteristics, all are in the business of facilitating a high quality of life for residents, typically by providing local government services to residents. Though individual jurisdiction circumstances, resources and practices vary, the objective virtually everywhere is to help create and sustain highly livable communities.

Where Benchmarks Come From

NRC has been leading the strategic use of surveys for local governments since 1991, when the principals of the company wrote the first edition of what became the classic text on citizen surveying. In *Citizen Surveys: how to do them, how to use them, what they mean*, published by ICMA, not only were the principles for quality survey methods articulated, but both the idea of benchmark data for citizen opinion and the method for gathering benchmark data were pioneered. The argument for benchmarks was called “In Search of Standards.” “What has been missing from a local government’s analysis of its survey results is the context that school administrators can supply when they tell parents how an 80 percent score on the social studies test compares to test results from other school systems...”

Surveys in the benchmarks are conducted with typically no fewer than 400 residents in each jurisdiction, opinions are intended to represent over 30 million Americans. NRC innovated a method for quantitatively integrating the results of surveys that are conducted by NRC with those that others have conducted. The integration methods have been thoroughly described not only in the *Citizen Surveys* book, but also in *Public Administration Review* and the *Journal of Policy Analysis and Management*. Scholars who specialize in the analysis of citizen surveys regularly have relied on this work.⁴ The method described in those publications is refined regularly and statistically tested on a growing number of citizen surveys in NRC's proprietary databases. NRC's work on calculating national benchmarks for resident opinions about service delivery and quality of life won the Samuel C. May award for research excellence from the Western Governmental Research Association.

⁴ See, for example: Kelly, J. & Swindell, D. (2002). Service quality variation across urban space: First steps towards a model of citizen satisfaction. *Journal of Urban Affairs*, 24, 271-288 and Van Ryzin, G., Muzzio, D., Immerwahr, S., Gulick, L. & Martinez, E. (2004). Drivers and consequences of citizen satisfaction: An application of the American Customer Satisfaction Index Model to New York City, *Public Administration Review*, 64, 331- 341.

Trends over Time Report

If you have conducted The NCS before, you will automatically receive the Trends over Time report. In this report we show your percent positive ratings by year, how your most current results compare to your previous year's results and how you have compared to the national benchmark for each survey year.

The Trends over Time Report provides insight on the aspects of your community that may be improving or perhaps starting to decline. While trends for your national benchmark comparisons are provided for reference, the benchmark is constantly changing as communities conduct newer surveys or new communities conduct surveys and resident perspectives change. Overall, your trends represent, perhaps, the most powerful benchmark you have – a comparison of you to yourself in prior years. These trends can be a window into the impact of new policies, capital projects or programs in your community.

Table 1: Community Quality Overall

	Percent rating positively (e.g., excellent/good)			2013 compared to 2011	Comparison to benchmark		
	2009	2011	2013		2009	2011	2013
Overall quality of life	68%	74%	79%	Similar	Much lower	Similar	Similar
Overall image	76%	80%	78%	Similar	Similar	Higher	Similar
Place to live	72%	71%	82%	Higher	Similar	Similar	Much higher
Neighborhood	79%	84%	91%	Similar	Higher	Higher	Higher
Place to raise children	65%	69%	78%	Similar	Lower	Much higher	Higher
Place to retire	NA	NA	60%	NA	NA	NA	Much lower
Overall appearance	88%	87%	90%	Similar	Similar	Similar	Similar

Demographic and Geographic Subgroup Comparison Reports

An additional service many participants in The NCS choose is comparison of results by respondent characteristics. In the Demographic Subgroup Comparison Report, each survey question is cross-classified by responses from different demographic groups in your community. We typically show five demographic groupings (housing unit type, housing tenure, age, gender and race/ethnicity) so that you can see if results differ depending on the demographic category of respondent. The Geographic Subgroup Comparison Report is another optional service that compares survey responses by subgroups, in this case, based on respondents' location (e.g., district, neighborhood, ward, etc.). In order to create a report of geographic comparisons, the geographic subareas will need to be determined well before the survey mailing.

In these subgroup comparison reports, we show the percent positive rating and shade “statistically significant” differences grey. The shading is based on analysis of variance and chi-square tests of statistical significance where a “p-value” of 0.05 or less indicates that there is less than a 5% probability that differences observed among subgroups are due to chance; or in other words, a greater than 95% probability that there are differences that exist in the subgroups being compared.

Table 1: Community Characteristics General

Percent rating positively (e.g., excellent/good)	Housing unit type		Housing tenure		Age			Gender		Race/Ethnicity		Overall
	Detached	Attached	Rent	Own	18-34	35-54	55+	Female	Male	White alone, not Hispanic	Hispanic and/or other race	
The overall quality of life in ABC	58%	55%	53%	58%	55%	56%	59%	60%	54%	43%	56%	57%
Overall image or reputation of ABC	62%	55%	56%	59%	59%	56%	60%	56%	61%	58%	55%	58%
ABC as a place to live	68%	67%	64%	69%	64%	69%	69%	68%	68%	68%	67%	68%
Your neighborhood as a place to live	50%	49%	46%	51%	53%	49%	47%	50%	49%	49%	47%	50%
ABC as a place to raise children	63%	62%	62%	63%	62%	62%	65%	64%	62%	62%	55%	63%
ABC as a place to retire	60%	59%	57%	60%	60%	58%	61%	60%	58%	60%	60%	60%
Overall appearance of ABC	55%	50%	43%	56%	50%	52%	57%	52%	53%	52%	57%	53%

Table 1: Community Characteristics General

Percent rating positively (e.g., excellent/good)	District 1	District 2	District 3	District 4	Overall
The overall quality of life in ABC	53%	59%	58%	59%	57%
Overall image or reputation of ABC	50%	61%	60%	60%	58%
ABC as a place to live	60%	72%	72%	74%	68%
Your neighborhood as a place to live	45%	58%	50%	48%	50%
ABC as a place to raise children	57%	66%	65%	67%	63%
ABC as a place to retire	55%	65%	60%	65%	60%
Overall appearance of ABC	50%	52%	53%	59%	53%

Demographic subgroup comparisons can help with creating targeted communication and service campaigns to address the concerns of each group.

Geographic subgroup comparisons can help demonstrate the sense of equity felt across the community since residents in some parts of every community tend to feel better than do those in other areas about the services they receive or the livability of their neighborhood. Results from geographic subgroup comparisons will permit targeting of services, capital improvements and programs so that residents in all areas can feel that they are receiving their fair share of resources.

Open-ended Question Responses

The NCS standard questions are close-ended. A closed-ended question is one where a set of response options is listed as fixed choices on the survey and those taking the survey respond to each option listed. Open-ended questions have no answer choices from which respondents select their response. Instead, respondents must “create” their own answers and state them in their own words. The inclusion of an open-ended question is available as an additional service for The NCS that results in a separate Report of Open-ended Questions.

On the survey, respondents write, in their own words, their answer to the posed open-ended questions. In this report, the verbatim responses are categorized by topic area using qualitative coding techniques. Often, an “other” category is used for responses falling outside these coded categories. In general, a code is assigned when the number of related responses reaches a critical mass.

We will provide a table showing the frequency of each code to give a general overview of the responses.

Table 1: Question 13

What one thing do you like most about living in ABC?	2013
Location	38%
My neighborhood	16%
Quality of life in general	10%
Parks and open space	14%
Rural character	8%
Small town feel	7%
Other	7%
Total	100%

We also provide every verbatim response with its assigned code. This type of report gives you and others a chance to “hear” the voice of respondents in their own words.

Verbatim Responses

The following pages contain the respondents’ verbatim responses as written on the survey and have not been edited for spelling or grammar. Responses have been organized by coded topic areas.

What one thing do you like most about living in ABC?

Location

- Access to everything
- Actual location
- Close to city
- Close to metro
- Close to my office
- Close to town
- Close to work
- Close to work and everything is handy
- Convenience
- Convenience
- Convenience
- Everything is handy and close
- I like living south of the river
- It’s convenient to everything meaning shopping and the airport
- Location
- Location
- Proximity to downtown

My neighborhood

- Appearance of the neighborhoods
- Friendly people next door
- Good neighborhood
- Great neighborhood
- I love my neighborhood!
- Just happy with the neighborhood I live in
- Lots of kids in the neighborhood
- Neighbors
- My neighborhood

Understanding Survey Research

Survey Sampling

We systematically select households from a geocoded United States Postal Service (USPS) address list to ensure that only households located within the boundaries of a community are surveyed. Systematic sampling is a procedure whereby a complete list of all eligible addresses is culled, selecting every Nth one (a number that changes depending on the size of the population and the sample size to be selected) until the appropriate number of addresses is sampled. Not only does NRC scientifically and randomly sample households to participate in The NCS, but we also select, without bias, the household member to participate. This methodology helps ensure that the attitudes expressed by our respondent sample closely approximate the attitudes of all adult residents living in the community. Without controlling who in the household participates, it is likely that results would be biased towards those who are more sedentary and those without jobs (who may have different opinions about some services).

The Basic Service of The NCS includes mailing to randomly selected households. Though response rates across the US have dipped in recent years, the response rate for most administrations of The NCS ranges between 20% and 40%, which yields between 300 and 480 completed surveys.

Margin of Error and Confidence Intervals

It is customary to describe the precision of estimates made from surveys by a “level of confidence” and accompanying “confidence interval” (or margin of error). A traditional level of confidence, and the one used for The NCS, is 95%. The 95% confidence interval can be any size and quantifies the sampling error or imprecision of the survey results because *some* residents’ opinions are used to estimate *all* residents’ opinions. The relationship between sample size and precision of estimates or margin of error (at the 95% confidence level) is shown in the adjacent table. With a typical sample size for The NCS, this means an estimated margin of error at the 95% confidence level of plus or minus four to six percentage points.

Number of completed surveys	Margin of error
100	±9.8%
300	±5.7%
400	±4.9%
500	±4.4%
750	±3.6%

A 95% confidence interval indicates that for every 100 random samples of the same number of residents, 95 of the confidence intervals created will include the “true” population response. This theory is applied in practice to mean that the “true” perspective of the target population lies within the confidence interval created for a single survey. For example, if 75% of residents rate a service as “excellent” or “good,” then the 4% margin of error (for the 95% confidence interval) indicates that the range of likely responses for the entire community is between 71% and 79%. This source of uncertainty is called sampling error. In addition to sampling error, other sources of error may affect any survey, including the non-response of residents with opinions different from survey responders. Though standardized on The NCS, on other surveys, differences in question wording, order, translation and data entry, as examples, can lead to somewhat varying results.

For subgroups of responses, the margin of error increases because the sample size for the subgroup is smaller. For subgroups of approximately 100 respondents, the margin of error is plus or minus 10 percentage points.

Non-response Bias

Knowing that residents in single family dwellings are more likely to respond to a mail survey, NRC oversamples residents of multi-family dwellings to ensure their proper representation in the sample data. Rather than giving all residents an equal chance of receiving the survey, this is systematic, stratified sampling, which gives each resident of the community a known chance of receiving the survey (and apartment dwellers, for example, a greater chance than single family home dwellers).

Weighting

The first step in preparing the data for analysis is to weight the data to reflect the demographic profile of the residents of the community being surveyed. Weighting is the approach used by quality survey consultancies to ensure that the demographic characteristics of the sample mirror the overall population. It is an important method to adjust for potential non-response bias. NRC uses a special software program of mathematical algorithms to calculate the appropriate weights. Several different weighting “schemes” may be tested to ensure the best fit for the data.

“Don’t know” Responses

Generally, a small portion of respondents select “don’t know” for most survey items and inevitably some items have a larger “don’t know” percentage. Comparing responses to a set of items on the same scale can be misleading when the “don’t know” responses have been included. If two items have disparate “don’t know” percentages (2% versus 17%, for example), any apparent similarities or differences across the remaining response options may disappear once the “don’t know” responses are removed. Such an example is shown below.

When comparing the community as a place to live to the community as a place to work, it would appear that 76% of respondents rated the community as a place to live as “excellent” or “good” compared to just 63% for the community as a place to work. However, the community as a place to work has a much higher proportion of respondents answering “don’t know” (17% compared to 2%).

	Place to live		Place to work	
	Number	Percent	Number	Percent
Excellent	48	25%	38	20%
Good	97	51%	81	43%
Fair	23	12%	22	12%
Poor	19	10%	17	9%
Don't know	3	2%	32	17%
Total	190	100%	190	100%

If we remove the three “don’t know” responses from the community as a place to live and the 32 “don’t know” responses from the community as a place to work, the two items are actually much more similar in their evaluations: 78% “excellent” or “good” place to live compared to 75% “excellent” or “good” place to work.

	Place to live		Place to work	
	Number	Percent	Number	Percent
Excellent	48	26%	38	24%
Good	97	52%	81	51%
Fair	23	12%	22	14%
Poor	19	10%	17	11%
Total	187	100%	158	100%

Response Scale

The scale on which respondents are asked to record their opinions about service and community quality is “excellent,” “good,” “fair” or “poor” (EGFP). This scale has important advantages over other scale possibilities (very good to very bad; very satisfied to very dissatisfied; strongly agree to strongly disagree, as examples). EGFP is used by the plurality of communities conducting citizen surveys across the U.S. The advantage of familiarity was one that NRC did not want to dismiss when crafting The NCS questionnaire, because elected officials, staff and residents already are acquainted with opinion surveys measured this way. EGFP also has the advantage of offering three positive options, rather than only two, over which a resident can offer an opinion. While symmetrical scales often are the right choice in other measurement tasks, NRC has found that ratings of almost every local government service in almost every community tend, on average, to be positive (that is, above the scale midpoint). Therefore, to permit finer distinctions among positively rated services, EGFP offers three options across which to spread those ratings. With questions worded for EGFP, responses are more neutral because they require no positive statement of service quality to judge (as agree-disagree scales require) and, finally, EGFP intends to measure absolute quality of service delivery or community quality (unlike satisfaction scales which ignore residents’ perceptions of quality in favor of their report on the acceptability of the level of service offered).

What is your race? (Mark one or more races to indicate what race(s) you consider yourself to be.)	Percent	Number
American Indian or Alaskan Native	2%	N=5
Asian, Asian Indian or Pacific Islander	3%	N=8
Black or African American	0%	N=1
White	95%	N=278
Other	4%	N=11

Total may exceed 100% as respondents could select more than one option.

Table 66: Question D15

In which category is your age?	Percent	Number
18 to 24 years	2%	N=6
25 to 34 years	19%	N=58
35 to 44 years	11%	N=33
45 to 54 years	23%	N=67
55 to 64 years	12%	N=35
65 to 74 years	19%	N=56
75 years or older	14%	N=41
Total	100%	N=295

Table 67: Question D16

What is your sex?	Percent	Number
Female	52%	N=151
Male	48%	N=142
Total	100%	N=293

The National Citizen Survey™

Table 68: Question D17

Do you consider a cell phone or landline your primary telephone number?	Percent	Number
Cell	76%	N=228
Land line	11%	N=33
Both	13%	N=40
Total	100%	N=300

Appendix B: Benchmark Comparisons

Comparison Data

NRC's database of comparative resident opinion is comprised of resident perspectives gathered in surveys from over 500 communities whose residents evaluated the same kinds of topics on The National Citizen Survey™. The comparison evaluations are from the most recent survey completed in each community; most communities conduct surveys every year or in alternating years. NRC adds the latest results quickly upon survey completion, keeping the benchmark data fresh and relevant. The communities in the database represent a wide geographic and population range. The City of Scottsdale chose to have comparisons made to the entire database.

Interpreting the Results

Ratings are compared when there are at least five communities in which a similar question was asked. Where comparisons are available, four columns are provided in the table. The first column is Scottsdale's "percent positive." The percent positive is the combination of the top two most positive response options (i.e., "excellent" and "good," "very safe" and "somewhat safe," etc.), or, in the case of resident behaviors/participation, the percent positive represents the proportion of respondents indicating "yes" or participating in an activity at least once a month. The second column is the rank assigned to Scottsdale's rating among communities where a similar question was asked. The third column is the number of communities that asked a similar question. The final column shows the comparison of Scottsdale's rating to the benchmark.

In that final column, Scottsdale's results are noted as being "higher" than the benchmark, "lower" than the benchmark or "similar" to the benchmark, meaning that the average rating given by Scottsdale residents is statistically similar to or different (greater or lesser) than the benchmark. Being rated as "higher" or "lower" than the benchmark means that Scottsdale's average rating for a particular item was more than 10 points different than the benchmark. If a rating was "much higher" or "much lower," then Scottsdale's average rating was more than 20 points different when compared to the benchmark.

Benchmark Database Characteristics	
Region	Percent
New England	3%
Middle Atlantic	5%
East North Central	15%
West North Central	13%
South Atlantic	22%
East South Central	3%
West South Central	7%
Mountain	16%
Pacific	16%
Population	Percent
Less than 10,000	10%
10,000 to 24,999	22%
25,000 to 49,999	23%
50,000 to 99,999	22%
100,000 or more	23%

National Benchmark Comparisons

Appendix C: Detailed Survey Methods

The National Citizen Survey (The NCS™), conducted by National Research Center, Inc., was developed to provide communities an accurate, affordable and easy way to assess and interpret resident opinion about important local topics. Standardization of common questions and survey methods provide the rigor to assure valid results, and each community has enough flexibility to construct a customized version of The NCS.

Results offer insight into residents' perspectives about the community as a whole, including local amenities, services, public trust, resident participation and other aspects of the community in order to support budgeting, land use and strategic planning and communication with residents. Resident demographic characteristics permit comparison to the Census as well as comparison of results for different subgroups of residents. The City of Scottsdale funded this research. Please contact Scottsdale Assistant City Manager Brent Stockwell at BStockwell@scottsdaleaz.gov if you have any questions about the survey.

Survey Validity

The question of survey validity has two parts: 1) how can a community be confident that the results from those who completed the questionnaire are representative of the results that would have been obtained had the survey been administered to the entire population? and 2) how closely do the perspectives recorded on the survey reflect what residents really believe or do?

To answer the first question, the best survey research practices were used for the resources spent to ensure that the results from the survey respondents reflect the opinions of residents in the entire community. These practices include:

- Using a mail-out/mail-back methodology, which typically gets a higher response rate than phone for the same dollars spent. A higher response rate lessens the worry that those who did not respond are different than those who did respond.
- Selecting households at random within the community to receive the survey to ensure that the households selected to receive the survey are representative of the larger community.
- Over-sampling multi-family housing units to improve response from hard-to-reach, lower income or younger apartment dwellers.
- Selecting the respondent within the household using an unbiased sampling procedure; in this case, the "birthday method." The cover letter included an instruction requesting that the respondent in the household be the adult (18 years old or older) who most recently had a birthday, irrespective of year of birth.
- Contacting potential respondents three times to encourage response from people who may have different opinions or habits than those who would respond with only a single prompt.
- Inviting response in a compelling manner (using appropriate letterhead/logos and a signature of a visible leader) to appeal to recipients' sense of civic responsibility.
- Providing a pre-addressed, postage-paid return envelope.
- Offering the survey in Spanish or other language when requested by a given community.
- Weighting the results to reflect the demographics of the population.

The answer to the second question about how closely the perspectives recorded on the survey reflect what residents really believe or do is more complex. Resident responses to surveys are influenced by a variety of factors. For questions about service quality, residents' expectations for service quality play a role as well as the "objective" quality of the service provided, the way the resident perceives the entire community (that is, the context in which the service is provided), the scale on which the resident is asked to record his or her opinion and, of course, the opinion, itself, that a resident holds about the service. Similarly a resident's report of certain behaviors is colored by what he or she believes is the socially desirable response (e.g., reporting tolerant behaviors toward "oppressed groups," likelihood of voting for a tax increase for services to poor people, use of alternative modes of travel to work besides the single occupancy vehicle), his or her memory of the actual behavior (if it is not a question speculating about future actions, like a vote), his or her confidence that he or she can be honest without suffering any negative consequences (thus the need for anonymity) as well as the actual behavior itself.

How closely survey results come to recording the way a person really feels or behaves often is measured by the coincidence of reported behavior with observed current behavior (e.g., driving habits), reported intentions to behave with observed future behavior (e.g., voting choices) or reported opinions about current community quality

with objective characteristics of the community (e.g., feelings of safety correlated with rates of crime). There is a body of scientific literature that has investigated the relationship between reported behaviors and actual behaviors. Well-conducted surveys, by and large, do capture true respondent behaviors or intentions to act with great accuracy. Predictions of voting outcomes tend to be quite accurate using survey research, as do reported behaviors that are not about highly sensitive issues (e.g., family abuse or other illegal or morally sanctioned activities). For self-reports about highly sensitive issues, statistical adjustments can be made to correct for the respondents' tendency to report what they think the "correct" response should be.

Research on the correlation of resident opinion about service quality and "objective" ratings of service quality vary, with some showing stronger relationships than others. NRC's own research has demonstrated that residents who report the lowest ratings of street repair live in communities with objectively worse street conditions than those who report high ratings of street repair (based on road quality, delay in street repair, number of road repair employees). Similarly, the lowest rated fire services appear to be "objectively" worse than the highest rated fire services (expenditures per capita, response time, "professional" status of firefighters, breadth of services and training provided). Resident opinion commonly reflects objective performance data but is an important measure on its own. NRC principals have written, "If you collect trash three times a day but residents think that your trash haul is lousy, you still have a problem."

Selecting Survey Recipients

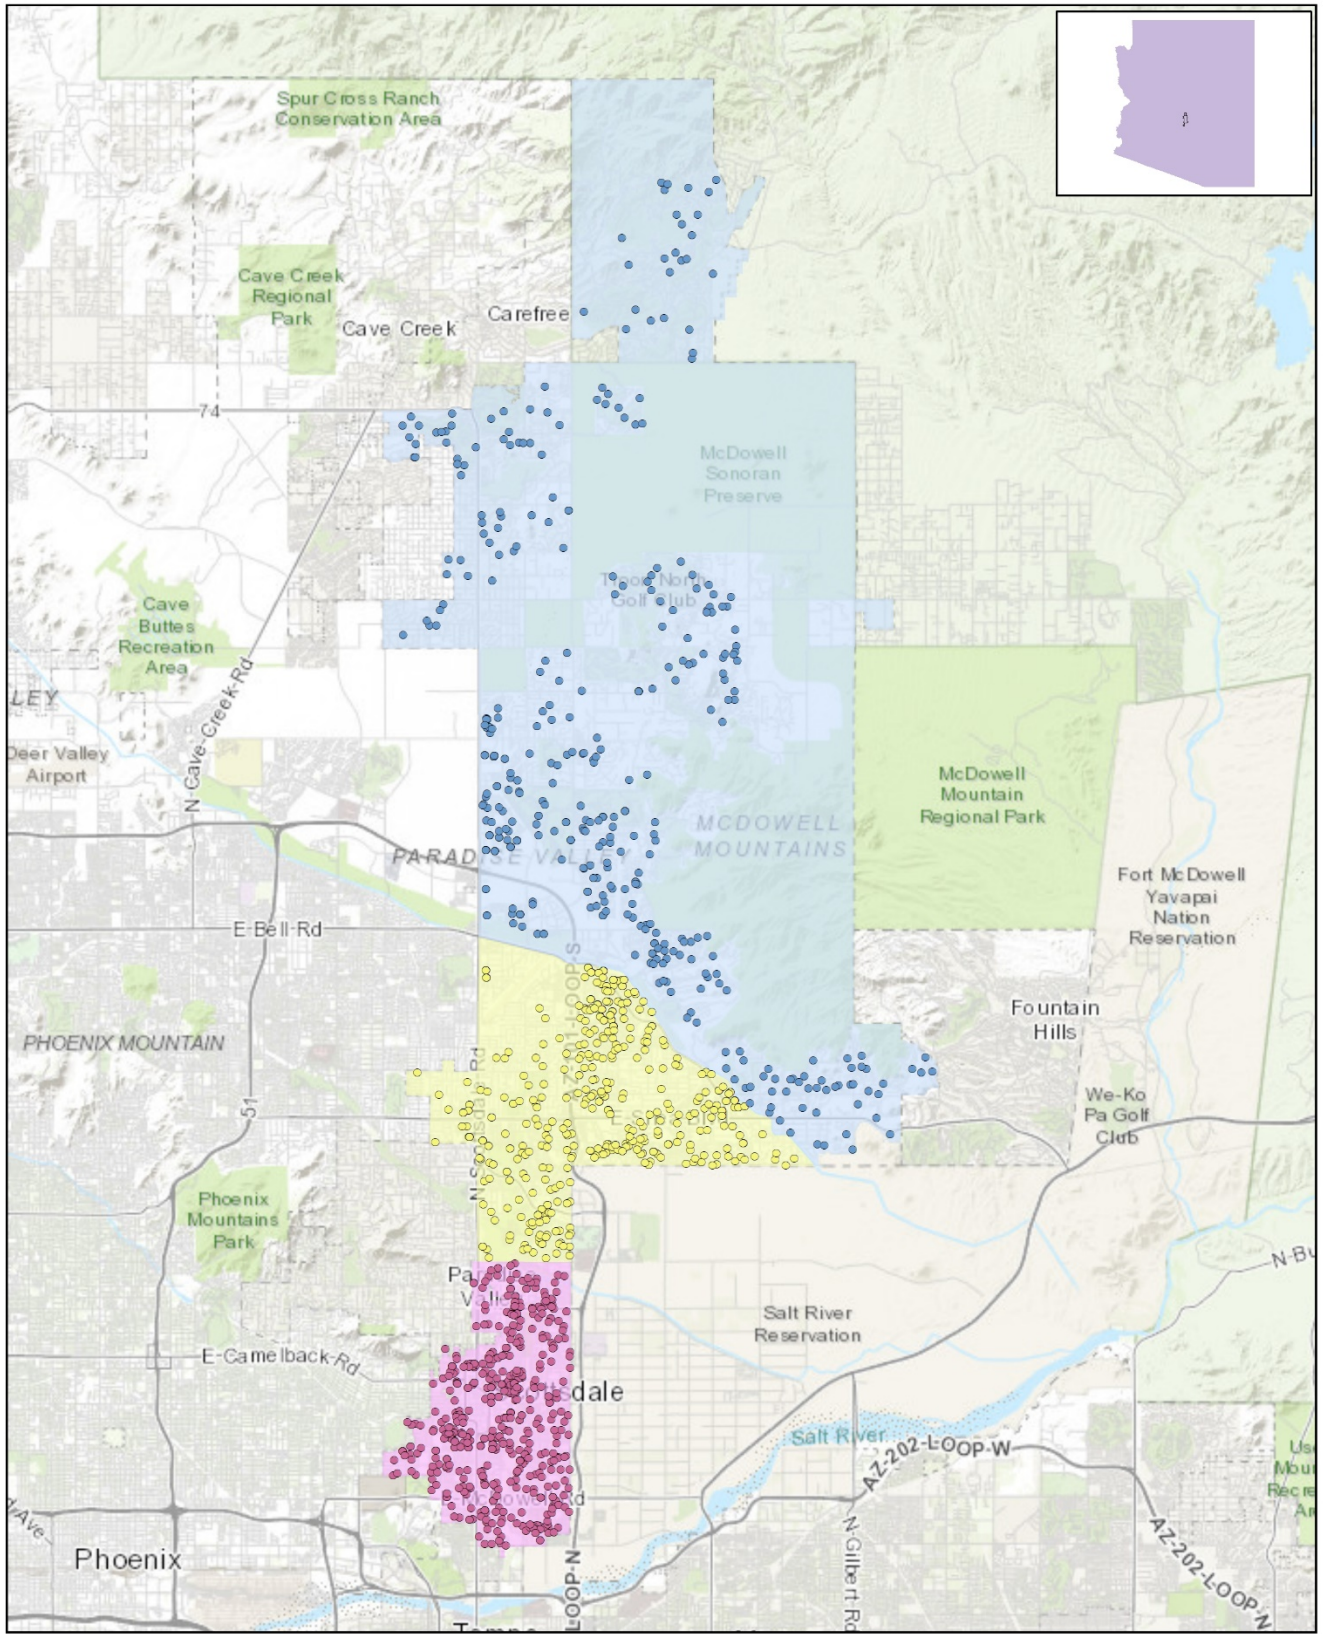

"Sampling" refers to the method by which households were chosen to receive the survey. All households within the City of Scottsdale were eligible to participate in the survey. A list of all households within the zip codes serving Scottsdale was purchased from Go-Dog Direct based on updated listings from the United States Postal Service. Since some of the zip codes that serve the City of Scottsdale households may also serve addresses that lie outside of the community, the exact geographic location of each housing unit was compared to community boundaries using the most current municipal boundary file (updated on a quarterly basis) and addresses located outside of the City of Scottsdale boundaries were removed from consideration. Each address identified as being within City boundaries was further identified as being within one of three geographic subareas (South of Indian Bend Road, North of Indian Bend Road and South or West of CAP Canal, North or East of CAP Canal).

To choose the 1,600 survey recipients, a systematic sampling method was applied to the list of households previously screened for geographic location. Systematic sampling is a procedure whereby a complete list of all possible households is culled, selecting every *N*th one, giving each eligible household a known probability of selection, until the appropriate number of households is selected. Multi-family housing units were selected at a higher rate as residents of this type of housing typically respond at lower rates to surveys than do those in single-family housing units. Figure 1 displays a map of the households selected to receive the survey. In general, because of the random sampling techniques used, the displayed sampling density will closely mirror the overall housing unit density (which may be different from the population density). While the theory of probability assumes no bias in selection, there may be some minor variations in practice (meaning, an area with only 15% of the housing units might be selected at an actual rate that is slightly above or below that).

An individual within each household was selected using the birthday method. The birthday method selects a person within the household by asking the "person whose birthday has most recently passed" to complete the questionnaire. The underlying assumption in this method is that day of birth has no relationship to the way people respond to surveys. This instruction was contained in the cover letter accompanying the questionnaire.

In addition to the scientific, random selection of households, a link to an online "opt-in" survey was publicized and posted to the City of Scottsdale website. This opt-in survey was identical to the scientific survey and open to all City residents. The data presented in this report exclude the opt-in survey data. These data can be found in the *Supplemental Online Survey Results* provided under separate cover.

Survey Administration and Response

Selected households received three mailings, one week apart, beginning on November 21, 2018. The first mailing was a prenotification postcard announcing the upcoming survey. The next mailing contained a letter from the Mayor inviting the household to participate, a questionnaire and a postage-paid return envelope. The final mailing contained a reminder letter, another survey and a postage-paid return envelope. The second cover letter asked those who had not completed the survey to do so and those who had already done so to refrain from turning in another survey. The survey was available in English. The City of Scottsdale chose to augment their administration of The NCS with several additional services, including demographic and geographic subgroup comparisons. The results of these additional services have been provided under separate cover. Completed surveys were collected over the following seven weeks. The online “opt-in” survey became available to all residents on December 26, 2018 and remained open for six weeks.

About 9% of the 1,600 surveys mailed were returned because the housing unit was vacant or the postal service was unable to deliver the survey as addressed. Of the remaining 1,450 households that received the survey, 305 completed the survey, providing an overall response rate of 21%. Of the 305 completed surveys, 31 were completed online. Additionally, responses were tracked by geographic subareas; response rates by area ranged from 19% to 26%. The response rates were calculated using AAPOR’s response rate #2¹ for mailed surveys of unnamed persons. Additionally, 104 opt-in residents completed the online opt-in survey; results of the opt-in survey can be found in the *Supplemental Online Survey Results* report provided under separate cover.

Table 75: Survey Response Rates by Geographic Subarea

	Area 1	Area2	Area 3	Overall
Total sample used	619	550	431	1,600
I=Complete Interviews	117	91	94	301
P=Partial Interviews	1	1	2	4
R=Refusal and break off	0	0	0	0
NC=Non Contact	0	0	0	0
O=Other	0	0	0	0
UH=Unknown household	0	0	0	0
UO=Unknown other	448	404	286	1,138
Response rate: (I+P)/(I+P) + (R+NC+O) + (UH+UO)	21%	19%	26%	21%

Confidence Intervals

It is customary to describe the precision of estimates made from surveys by a “level of confidence” and accompanying “confidence interval” (or margin of error). A traditional level of confidence, and the one used here, is 95%. The 95% confidence interval can be any size and quantifies the sampling error or imprecision of the survey results because some residents’ opinions are relied on to estimate all residents’ opinions.²

The margin of error for the City of Scottsdale survey is no greater than plus or minus six percentage points around any given percent reported for all respondents (305 completed surveys).

For subgroups of responses, the margin of error increases because the number of respondents for the subgroup is smaller.

Survey Processing (Data Entry)

Upon receipt, completed surveys were assigned a unique identification number. Additionally, each survey was reviewed and “cleaned” as necessary. For example, a question may have asked a respondent to pick two items out of a list of five, but the respondent checked three; in this case, NRC would use protocols to randomly choose two of the three selected items for inclusion in the dataset.

¹ See AAPOR’s Standard Definitions here: [http://www.aapor.org/Standards-Ethics/Standard-Definitions-\(1\).aspx](http://www.aapor.org/Standards-Ethics/Standard-Definitions-(1).aspx) for more information

² A 95% confidence interval indicates that for every 100 random samples of this many residents, 95 of the confidence intervals created will include the “true” population response. This theory is applied in practice to mean that the “true” perspective of the target population lies within the confidence interval created for a single survey. For example, if 75% of residents rate a service as “excellent” or “good,” then the 4% margin of error (for the 95% confidence interval) indicates that the range of likely responses for the entire community is between 71% and 79%. This source of uncertainty is called sampling error. In addition to sampling error, other sources of error may affect any survey, including the non-response of residents with opinions different from survey responders. Though standardized on The NCS, on other surveys, differences in question wording, order, translation and data entry, as examples, can lead to somewhat varying results.

The National Citizen Survey™

All surveys then were entered twice into an electronic dataset; any discrepancies were resolved in comparison to the original survey form. Range checks as well as other forms of quality control were also performed.

NRC used SurveyGizmo, a web-based survey and analytics platform, to collect the online survey data. Use of an online system means all collected data are entered into the dataset when the respondents submit the surveys. Skip patterns are programmed into system so respondents are automatically “skipped” to the appropriate question based on the individual responses being given. Online programming also allows for more rigid control of the data format, making extensive data cleaning unnecessary.

A series of quality control checks were also performed in order to ensure the integrity of the web data. Steps may include and not be limited to reviewing the data for clusters of repeat IP addresses and time stamps (indicating duplicate responses) and removing empty submissions (questionnaires submitted with no questions answered).

Survey Data Weighting

The demographic characteristics of the survey respondents were compared to those found in the 2010 Census and American Community Survey estimates for adults in the City of Scottsdale. The primary objective of weighting survey data is to make the survey respondents reflective of the larger population of the community. The characteristics used for weighting were housing tenure (rent or own), race and ethnicity and sex and age. No adjustments were made for design effects. The results of the weighting scheme are presented in the following table.

Table 76: Scottsdale, AZ 2018 Weighting Table

Characteristic	Population Norm	Unweighted Data	Weighted Data
Housing			
Rent home	32%	17%	30%
Own home	68%	83%	70%
Detached unit*	59%	61%	58%
Attached unit*	41%	39%	42%
Race and Ethnicity			
White	91%	91%	91%
Not white	9%	9%	9%
Not Hispanic	93%	94%	92%
Hispanic	7%	6%	8%

* U.S. Census Bureau, 2011-2015 American Community Survey 5-Year Estimates

Survey Data Analysis and Reporting

The survey dataset was analyzed using the Statistical Package for the Social Sciences (SPSS). For the most part, the percentages presented in the reports represent the “percent positive.” The percent positive is the combination of the top two most positive response options (i.e., “excellent” and “good,” “very safe” and “somewhat safe,” “essential” and “very important,” etc.), or, in the case of resident behaviors/participation, the percent positive represents the proportion of respondents indicating “yes” or participating in an activity at least once a month.

The National Citizen Survey™

On many of the questions in the survey respondents may answer “don’t know.” The proportion of respondents giving this reply is shown in the full set of responses included in Appendix A. However, these responses have been removed from the analyses presented in the reports. In other words, the tables and graphs display the responses from respondents who had an opinion about a specific item. When a table for a question that only permitted a single response does not total to exactly 100%, it is due to the common practice of percentages being rounded to the nearest whole number.

The data for the opt-in survey are presented separately in the report titled *Supplemental Online Survey Results*.

Appendix D: Survey Materials

Dear Scottsdale Resident,

It won't take much of your time to make a big difference!

Your household has been randomly selected to participate in a survey about your community. Your survey will arrive in a few days.

Thank you for helping create a better City!

Sincerely,

W. J. "Jim" Lane
Mayor

November 2018

Dear City of Scottsdale Resident:

Please help us shape the future of Scottsdale! You have been selected at random to participate in the 2018 Scottsdale Citizen Survey.

Please take a few minutes to fill out the enclosed survey. Your participation in this survey is very important – especially since your household is one of only a small number of households being surveyed. Your feedback will help Scottsdale make decisions that affect our City. Our independent survey firm crafted unbiased questions and selected households and residents at random to assure every resident in Scottsdale had a chance to participate and every result includes a range of certainty known as the margin of error.

A few things to remember:

- **Your responses are completely anonymous.**
- In order to hear from a diverse group of residents, the adult 18 years or older in your household who most recently had a birthday should complete this survey.
- **You may return the survey by mail in the enclosed postage-paid envelope, or you can complete the survey online at:**

www.bit.ly/XXXXPlaceholderXXXX

If you have any questions about the survey, please call my office at 480-312-2800. After completing the survey, you are welcome to contact us with any suggestions for improvement by phone or by emailing us at feedback@ScottsdaleAZ.gov. Please help us shape the future of Scottsdale.

Thank you for your time and participation!

Sincerely,

W.J. "Jim" Lane
Mayor

Si requiere ayuda para completar esta encuesta sobre la comunidad y servicios municipales, pídale a algún amigo o familiar que le ayude. También puede llamar al Paiute Neighborhood Center al teléfono: 480-312-2529.

The City of Scottsdale 2018 Citizen Survey

Please complete this questionnaire if you are the adult (age 18 or older) in the household who most recently had a birthday. The adult's year of birth does not matter. Please select the response (by circling the number or checking the box) that most closely represents your opinion for each question. Your responses are anonymous and will be reported in group form only.

1. Please rate each of the following aspects of quality of life in Scottsdale:
